The Case of the Gasping Garbage

Question: What sparked the investigation into the case of the gasping garbage?

Answer: A video of a large pile of garbage heaving and making gasping noises went viral on social media.

Question: What was the initial theory behind the strange phenomenon?

Answer: Some speculated that the garbage was alive or that it contained a trapped animal. However, experts quickly dismissed these theories.

Question: What did further investigation reveal?

Answer: Scientists determined that the noises were produced by a buildup of methane gas inside the garbage. As the gas expanded and contracted, it caused the garbage pile to rise and fall, creating the illusion of gasping.

Question: Why had such a large amount of methane gas accumulated?

Answer: The garbage pile was located in a landfill with poor ventilation. The organic matter in the garbage decomposed anaerobically (without oxygen), producing methane as a byproduct.

Question: What steps were taken to address the situation?

Answer: Authorities installed a ventilation system in the landfill to allow the methane gas to escape. They also implemented measures to reduce the production of methane by segregating organic waste from other garbage.
