Introduction Military doctrine is a set of principles that guide the planning, training, and execution of military operations. It is a product of a wide range of factors, including military history, technology, geography, and political ideology. This article examines the sources of military doctrine in France, Britain, and Germany between the World Wars.

France French military doctrine in the interwar period was heavily influenced by the experience of World War I. The French believed that the war had been a costly and unnecessary conflict, and they sought to avoid another such disaster. Their doctrine emphasized defense, with a strong focus on fortifications and artillery. They also developed a new concept of "offensive defense," which sought to counter an enemy attack by launching a preemptive offensive.

Britain British military doctrine in the interwar period was shaped by a combination of factors, including the lessons of World War I, the need to defend the empire, and the development of new technologies such as the aircraft carrier. The British believed that they could not match the continental powers in a land war, so they focused on their naval strength and the development of air power. Their doctrine emphasized mobility and flexibility, with a strong focus on combined operations between the navy, army, and air force.

Germany German military doctrine in the interwar period was heavily influenced by the writings of General Hans von Seeckt. Seeckt believed that Germany could not defeat France in a conventional war, so he developed a new doctrine that emphasized mobility, surprise, and the use of armored forces. This doctrine was later adopted by the Wehrmacht, and it proved to be highly effective in the early stages of World War II.
