Airmar Technology Corporation: A Comprehensive Guide**

What Does Airmar Do?

Airmar Technology Corporation is a global leader in developing and manufacturing marine electronic sensors and transducers. These devices provide vital information for navigation, depth sounding, speed measurement, and fish finding.

How to Identify Airmar Transducer

Airmar transducers typically bear the "Airmar" logo, either on the housing or on a label. They may also have a model number or part number etched on the unit.

Is Airmar Transducer Compatible with Garmin?

Yes, many Airmar transducers are compatible with Garmin marine electronics. Check the Garmin compatibility guide or consult with Airmar technical support for specific models.

Who Makes Airmar Transducers?

Airmar transducers are manufactured by Airmar Technology Corporation.

Who Acquired Airmar?

Navico acquired Airmar in 2019.

Who is the CEO of Airmar Technology Corporation?

Jason Gillespie

How Do You Test an Airmar Depth Transducer?

To test an Airmar depth transducer:

1. Place the transducer in a bucket or tank of water.
2. Connect the transducer to a compatible display unit.
3. Turn on the display unit and check if it displays the depth.

What Are 3 of the Most Common Transducer Types?

- **Through-hull Transducers:** Mounted on the hull of the boat.
- **Transom-mount Transducers:** Mounted on the transom of the boat.
- **In-hull Transducers:** Installed inside the hull of the boat.

How Do You Check a Transducer?

To check a transducer:

1. Inspect the housing and cable for damage.
2. Test the transducer in a bucket or tank of water, as described above.
3. Check the connections for corrosion or loose fittings.

What Does a Watt Transducer Do?

A watt transducer measures electrical power in watts. It is used for monitoring and controlling electrical systems.

What Does a CHIRP Transducer Do?

A CHIRP transducer transmits and receives a series of pulses across a wide range of frequencies. This results in higher resolution and target separation compared to traditional transducers.

What Does a Bass Transducer Do?

A bass transducer is designed specifically for detecting bass fish. It typically operates at lower frequencies and has a narrow beam angle, making it ideal for targeting bass in shallow waters.

How Does Boat Sonar Work?

Boat sonar uses sound waves to detect underwater objects. A transducer transmits sound waves into the water, and when these waves hit an object, they bounce back to the transducer. The time it takes for the waves to return, combined with the wave frequency and speed, is used to calculate the depth and location of the object.
