Solution of Electrical Machinery by Bimbhra and Chozhanore

Introduction

The Solution of Electrical Machinery by P.S. Bimbhra and G.C. Chozhanore is a comprehensive textbook that covers all aspects of electrical machinery. It is a widely used reference for students, engineers, and professionals in the field of electrical engineering.

Questions and Answers

1. What are the different types of electrical machines?

- AC machines: Induction motors, synchronous motors, generators
- DC machines: DC motors, DC generators
- Special-purpose machines: Stepper motors, brushless motors, servomotors

2. What is the difference between an induction motor and a synchronous motor?

- Induction motors operate on the principle of electromagnetic induction, while synchronous motors operate on the principle of magnetic locking.
- Induction motors are self-starting, while synchronous motors require external excitation to start.
- Synchronous motors have higher efficiency and better speed regulation than induction motors.

3. What is the purpose of a transformer?

- Transformers are used to change the voltage and current levels of an AC power system.
- They consist of two or more coils wound on a laminated iron core.
- Transformers can be classified into step-up transformers (increase voltage) and step-down transformers (decrease voltage).

4. What is the principle of operation of a DC motor?

- DC motors operate on the principle of electromagnetic attraction and repulsion.
- When current flows through the coils of the stator, it creates a magnetic field.
- The interaction between the stator magnetic field and the magnetic field of the rotor (armature) produces torque that causes the motor to rotate.

5. What are the different types of losses in electrical machines?

- Copper losses: Due to the resistance of the windings
- Iron losses: Due to hysteresis and eddy currents in the iron core
- Friction and windage losses: Due to mechanical friction and the movement of the rotor through the air
- Stray losses: Due to leakage flux and other miscellaneous factors
