**When did the Olympus OM-D-E-M10 Mark IV come out?** The camera utilizes the micro four-thirds system and was announced on August 4, 2020, and launched on September 18 of the same year. It is the first OM-D camera to feature a flip-down LCD monitor, and the first E-M10 model to include a 20 Megapixel live MOS sensor.

**Is there a way to increase shutter speed?** To take direct control of the shutter speed, set your camera to Shutter Priority (or Tv, which stands for Time Value). You can then set the shutter speed by rotating the camera's main dial, or by using the touchscreen that's available on many EOS cameras, including the EOS R50 and EOS R8.

**What is the fastest shutter speed setting?** The typical range of shutter speeds varies from camera to camera. In most cases, the fastest shutter speed available will be between 1/8000 sec and 1/4000 sec, depending on the camera. The longest shutter speed available is typically 30 seconds, but you can exposure for longer if

your camera has a "Bulb" mode.

**What is the sharpest shutter speed?** Shutter Speed Range: 1/500th – 1/250th Second Great for quickly moving objects, achieving sharp focus, without motion blur, with less ambient light in the scene.

**Is Olympus OM10 easy to use?** The OM10 is considered an amateur SLR 35mm film camera as it has easy-to-use functions. The Olympus OM10 was released in silver, as well as a limited edition black version. The Olympus OM10 has automatic shutter speed settings with the option of adding a manual adapter to the camera to make the camera fully manual.

**What year is the Olympus OM-D E-M10?** The Olympus OM-D E-M10 is a third model in the OM-D series of compact, mirrorless, interchangeable-lens cameras. It is of the Micro Four Thirds type that was introduced in January 2014.

**What is the sharpest aperture setting?** As you raise your f number, making the aperture smaller, the image becomes sharper, and most lenses are sharpest around f8. However, this doesn't mean you should just shoot everything at f8. You need to take into consideration the depth of field. Depth of field refers to how much is in focus from front to back.

**What is the battery life of the Olympus e-M10 Mark IV?** The E-M10 Mark IV uses the same BLS-50 rechargeable battery as earlier models. It's rated for 360 shots between charges, not bad for a mirrorless camera.

**Is EM10 weather sealed?** The camera is not weather-sealed, but I exposed mine to some raindrops and it still works fine.

**What happens if you increase shutter speed?** A fast shutter speed creates a shorter exposure — the amount of light the camera takes in — and a slow shutter speed gives the photographer a longer exposure.

**Does higher shutter speed make it brighter?** At a given aperture and ISO combination, a longer/slower shutter speed allows more time for natural light to strike our camera's sensor; we'll have a brighter image. A shorter/faster shutter speed leaves less time for natural light to hit the sensor; our photo will be darker.

**What should my shutter speed be?** Shutter Speed Cheat Sheet 1/500 - This shutter speed works best for wildlife, sports, and action photography. 1/250 - Here is an excellent shutter speed for slower-moving animals or walking people. 1/125 - Use this to take a photograph of a moving vehicle. 1/60 - This is the standard shutter speed on a camera.

**What shutter speed gives the sharpest image?** Shutter Speed If I am shooting at 50mm, I'll keep it at 1/50 second or faster. If I am shooting at 200mm, I'll keep it to 1/200 or faster. If I am shooting at 400mm, I'll keep it at 1/400 or faster. This is known as the focal length shutter speed rule.

**What is the rule of thumb for shutter speed?** Generally speaking, using the standard rule of thumb is to make the shutter speed equal to your focal length when hand-holding your camera. For example, if you are shooting with a 200mm lens then you want to keep your shutter speed at 1/200 sec or above to avoid any blur occurring from camera shake.

**What happens if the shutter speed is too low?** A lower shutter speed (e.g., 1/50) means the shutter is opening and closing at a slower rate. When your shutter opens and closes at a slower rate, you'll notice that your image will be bright, and fast-moving objects will be out of focus.
