Study Mendelian Genetics: Answer Key

1. What is the fundamental concept of Mendelian genetics?

- Answer: The concept of inheritance, where traits are passed down from parents to offspring through the transmission of genes.

2. Explain the Law of Segregation.

- Answer: This law states that each parent randomly contributes one of a pair of genes for a particular trait to their offspring.

3. Define dominant and recessive alleles.

- Answer: Dominant alleles express themselves in an individual even if only one copy of the allele is present. Recessive alleles are only expressed when two copies of the allele are inherited.

4. What is a hybrid trait?

- Answer: A hybrid trait occurs when an individual inherits different alleles for a trait, resulting in a blend or intermediate phenotype.

5. Describe the Law of Independent Assortment.

- Answer: This law states that the inheritance of one trait does not influence the inheritance of another trait. Genes for different traits are inherited independently during gamete formation.
