

Beyond descriptive translation studies investigations in homage to gideon tou

[Download Complete File](#)

What is the Toury theory of translation? Toury's theory was that the reasons for choosing a particular work to translate were more often non-literary or ideological than literary. It was also guided by the personal preference of the translator and the purpose of the translation.

What is the descriptive translation study theory? Descriptive Translation Studies, abbreviated as DTS, is a branch of pure translation studies that describes the phenomena of translating and translation. DTS is further divided into three categories: Product-oriented DTS describes individual translations of a given text or context.

What are the three norms of translation according to Toury? Toury outlined three kinds of norms in translation: Preliminary, Initial and Operational. Preliminary norms are those which influence the translation strategy, and decision as to which work to translate in a particular polysystem.

What do translation studies cover according to Holmes? Mapping the field, Holmes (1988, pp. 71–73) divides pure translation studies into two branches by purpose: 'descriptive translation studies (DTS)' – describing phenomena – and 'theoretical translation studies (ThTS)' – dealing with setting principles to explain and predict these phenomena.

What is a Toury translation? Toury therefore posits that the context framing a translation is that of the target culture, and, as such, the target text must always be interpreted as a result of the constraints and influences of such a target context, or as a cause for the introduction of changes into the target system.

What are the three theories of translation? There are three types of theories of translation- 1) Pre-linguistic theories. 2) Linguistic theories. 3) Cultural theories. During 1950 and 1960 systematic study of translation was begun.

What is the difference between prescriptive and descriptive translation studies? Essentially, prescriptive studies believe in the absolutism of equivalence between the target text and the source text while the descriptive school argues that equivalence is relative and posteriori: the translation norms for a specific translation activity under a certain context cannot be summarized until after the ...

Who is the father of translation theory? Because religion played a huge part in the development of translation, the early church named Jerome as the translation patron saint. In the fourth century AD, Saint Jerome translated the Bible to Latin, and the Latin Bible became predominantly used in the Roman Catholic church.

What is the descriptive theory of language? Descriptive theories (or theoretical frameworks) are theories about what languages are like. They are theories about what tools we need in order to provide adequate descriptions of individual languages. Explanatory theories (or theoretical frameworks), in contrast, are theories about why languages are the way they are.

What are the norms of Toury? According to Toury, norms are pervasive in translation practice, and also act prior to the actual event of translation. Toury sets up three main categories of translational norms: preliminary norms, the initial norm, and operational norms.

What are the golden rules of translation? These include: Be Brief and Clear: Use simple, understandable language to make the text readable. Use Proper Grammatical Structures: Maintain the original text's gist and tone with correct grammar. Understand the Content Thoroughly: Deeply comprehend the original text and conduct research if necessary.

What are the three things that are true about every translation?

What are the 4 types of translation studies?

What is the basic concept of translation studies? Translation studies is an academic interdiscipline dealing with the systematic study of the theory, description and application of translation, interpreting, and localization. As an interdiscipline, translation studies borrows much from the various fields of study that support translation.

What are the two approaches of translation studies? There are six main approaches within contemporary translation theory: sociolinguistic; communicative; hermeneutic; linguistic; literary; and semiotic.

What is the basic theory of translation? The theory of translation is a complex and multidisciplinary field that sits at the intersection of science and art. At its core, linguistic theory of translation is the process of conveying the essence and intent of a source text from one language to another, bridging the gap between different languages and cultures.

What is equivalence theory of translation? Here, equivalence involves an attempt to convert the content while retaining the context and meaning of the original. Many view languages as having equivalent words, and that translating from one to another simply involves finding a match. That cannot be farther from the truth.

What is the literary theory of translation? Translation of literature is fundamentally different from other categories. This is because the main principle of literary translation is the dominance of poetic communicative function. It means that in addition to rendering information to the reader, literary translation also has aesthetic functions.

What is the relevance theory of translation? Relevance theory regards translation as a kind of cross-language communication in two rounds. In the first round, the author of the original work and the translator constitute the two sides of communication, and the translator forms the cognitive psychological picture of the original work through relevance inference.
