The Risk-Driven Business Model: Four Questions That Will Define Your Company

In his book "The Risk-Driven Business Model," Karan Girotra, an associate professor of technology and operations management at INSEAD, argues that organizations should adopt a risk-driven approach to decision-making. He believes that by focusing on the risks associated with their decisions, organizations can make better choices and achieve their goals more effectively.

Girotra poses four key questions that organizations should answer in order to develop a risk-driven business model:

1. What are the biggest risks you face?

This question forces organizations to identify the potential threats that could impact their business. Once these risks have been identified, organizations can take steps to mitigate them.

2. How can you measure the impact of these risks?

This question requires organizations to develop metrics that track the potential impact of different risks. By understanding the magnitude of each risk, organizations can prioritize their efforts and focus on the most critical threats.

3. What resources do you need to manage these risks?

This question helps organizations to determine the resources that they need to allocate to risk management. By investing in the right resources, organizations can improve their ability to identify, assess, and mitigate risks.

4. How can you communicate these risks to stakeholders?

This question forces organizations to communicate their risk profile to stakeholders. By being transparent about the risks that the organization faces, stakeholders can make informed decisions about their involvement with the organization.

Girotra believes that by answering these four questions, organizations can develop a risk-driven business model that will help them to make better decisions, achieve their

goals more effectively, and manage the risks that they face.
