How do you check equations answers? Substitute the number for the variable in the equation. Simplify the expressions on both sides of the equation. Determine whether the resulting equation is true. If it is true, the number is a solution.

Which lines never meet? The lines which never meet and are in the same plane, are called parallel lines. If the lines are in different planes, they might not be parallel and still not meet.

How do I find the right answer for a test? Students should “try out” the answers by repeating the question and the various answer choices to themselves. Carefully read word for word and avoid adding words that have been deliberately left out to make an item incorrect. It's not uncommon for students to choose the first or second choice because it looks right.

Is there always a right answer in math? No. That statement would be true of arithmetic and certain problems in higher math, but once you hit non-linear algebra answers can also be described as complete or incomplete. After this point an answer can be correct but incomplete.

You can also put the answer into context, ask yourself does it make sense that the answer is this big, or this small?

How do you prove an answer in math? Use statements like "If A, then B" to prove that B is true whenever A is true. Write the givens and define your variables. Support your statement with a theorem, law, or definition, and end with a concluding symbol, like Q.E.D.

How to solve a maths equation?

How do you solve maths accurately? Take notes on any patterns that you identify in the problem. These patterns can help you to solve the problem and may even lead you directly to the answer. Review your information. Check what you have written down against the problem to make sure that you have accurately copied the numbers and other information.
