## **Chapter 1: Data Communications, Networks, and the Internet**

**Q:** What is the definition of data communications? **A:** Data communications involves the transmission of data between devices over a physical medium, such as wired cables or wireless signals.

**Q:** What are the three elements of a data communications system? **A:** A transmitter, a receiver, and a transmission medium.

**Q:** What is the difference between analog and digital data? **A:** Analog data represents continuous signals, while digital data represents discrete values represented as bits.

## **Chapter 2: Networks and the Internet**

**Q:** What is a network? **A:** A network connects multiple devices to share resources, such as files and printers.

**Q:** What are the different types of networks? **A:** Networks can be classified based on their size (LAN, MAN, WAN), topology (bus, star, mesh), and purpose (personal, business, public).

### **Paragraph 3**

#### **Chapter 3: Data Transmission**

**Q:** What is the difference between parallel and serial transmission? **A:** Parallel transmission sends multiple bits simultaneously, while serial transmission sends bits one at a time.

**Q:** What are the two main types of modulation techniques? **A:** Analog modulation and digital modulation.
