Skeletal Muscle Form and Function: 2nd Edition

By Brian R. Macintosh, Phillip Gardiner, and Alan J. McComas (2005)

Question 1: What is the primary function of skeletal muscle?

Answer: Skeletal muscle is responsible for voluntary movement by converting chemical energy into mechanical energy. It allows us to control our body, move objects, and maintain posture.

Question 2: Describe the basic structure of a skeletal muscle fiber.

Answer: A skeletal muscle fiber is a long, cylindrical cell that contains multiple nuclei and myofibrils. Myofibrils are bundles of actin and myosin filaments, which slide past each other during muscle contraction.

Question 3: What are the different types of skeletal muscle fibers?

Answer: There are three main types of skeletal muscle fibers:

- **Type I:** Slow-twitch, fatigue-resistant fibers designed for endurance activities.
- **Type IIa:** Fast-twitch, fatigue-resistant fibers used for both power and endurance.
- **Type IIb:** Fast-twitch, fatigable fibers specialized for brief, powerful bursts of activity.

Question 4: How are muscles innervated?

Answer: Muscles are innervated by motor neurons, which transmit electrical impulses from the spinal cord and brain. Each motor neuron can innervate multiple muscle fibers, forming a motor unit.

Question 5: What is the role of the neuromuscular junction?
