Technical Drawing with Engineering Graphics 14th Edition: Question and Answer

1. What is the difference between orthographic projection and oblique projection?

Orthographic projection shows an object as if it were viewed from a specific direction, such as from above or from the side. Oblique projection, on the other hand, shows an object as if it were viewed from an angle.

2. What are the three main types of orthographic projections?

The three main types of orthographic projections are plan view, elevation, and section view. Plan view shows the object from above, elevation shows the object from the side, and section view shows the object as if it were cut in half.

3. What is a scale drawing?

A scale drawing is a drawing that represents an object in a specific proportion to its actual size. For example, a scale drawing of a house might be 1 inch = 1 foot, which means that every inch on the drawing represents 1 foot in real life.

4. What is the purpose of a title block?

A title block is a box on the drawing that contains information about the drawing, such as the drawing title, the date, the scale, and the name of the person who created the drawing.

5. What is the difference between a dimension line and an extension line?

A dimension line is a line that indicates the distance between two points on a drawing. An extension line is a line that extends from an object's surface to the dimension line.

Solutions of P.S. Gill Engineering Drawing: Questions and Answers

1. What are the different types of projections used in engineering drawing?

- Orthographic projections: Project an object onto three perpendicular planes, creating a front view, top view, and side view.
- Axonometric projections: Project an object onto a single plane at an angle, providing a three-dimensional representation.
- Perspective projections: Project an object onto a plane as it would appear to the eye, creating a realistic representation.

2. Explain the principles of dimensioning in engineering drawing.

- Dimensions specify the size, shape, and location of features in a drawing.
- Standard dimensioning practices include:
 - Using dimension lines, arrowheads, and extension lines.
 - Indicating diameter and radius dimensions with symbols.
 - Avoiding unnecessary dimensions and redundant information.

3. What are the different types of scales used in engineering drawing?

- Natural scale: 1:1 (actual size)
- Enlarged scale: Greater than 1:1 (larger than actual size)

- Reduced scale: Less than 1:1 (smaller than actual size)
- Representative fraction: Expresses the ratio of the drawing to the actual object (e.g., RF 1/50)

4. Explain the concept of sectioning in engineering drawing.

- Sectioning removes part of an object in a drawing to reveal its internal features.
- Types of sectioning include:
 - Full section: Removes the entire portion of the object in front of the cutting plane.
 - Half section: Removes only half of the portion of the object in front of the cutting plane.
 - Offset section: Offset the cutting plane from the center of the object to reveal features not visible in a full or half section.

5. What are the different types of threads used in engineering drawing?

- Threads are helical grooves used to fasten components together.
- Types of threads include:
 - External threads: Cut onto the outside surface of a cylindrical rod.
 - Internal threads: Cut into the interior surface of a cylindrical hole.
 - Standard thread forms: Unified National Screw Thread, British Standard Whitworth, and metric threads.
 - Thread specifications include: diameter, pitch, lead, and length of engagement.

The Future of Us: A Q&A with Jay Asher

What inspired you to write "The Future of Us"?

Jay Asher: I wanted to explore the idea of soulmates and whether or not they are real. I also wanted to write a story about a first love that is both heartbreaking and

hopeful.

How did you develop the characters of Emma and Josh?

Jay Asher: I based Emma and Josh on people I knew in high school. I wanted them to be relatable and flawed, but also likeable. I also wanted their relationship to feel genuine and authentic.

What is the main theme of "The Future of Us"?

Jay Asher: The main theme of "The Future of Us" is that love is not always easy, but it is always worth fighting for. Even if a relationship doesn't work out, it can still teach us important lessons about ourselves and what we want in life.

What do you hope readers will take away from "The Future of Us"?

Jay Asher: I hope readers will be moved by Emma and Josh's story and that they will be inspired to think about their own relationships. I also hope they will realize that even if things don't always go their way, they can still create a happy and fulfilling life for themselves.

What are your plans for the future?

Jay Asher: I'm currently working on a new novel, which I'm very excited about. I'm also looking forward to continuing to connect with my readers through social media and my website.
