What's the difference between mathematical analysis and real analysis? Real analysis is a branch of mathematical analysis that analyses the behaviour of real numbers, sequences and series, and real functions. Convergence, limits, continuity, smoothness, differentiability, and integrability are some of the features of real-valued sequences and functions that real analysis explores.

Is mathematical analysis same as calculus? Mathematical Analysis therefore deals with functions, limits, variables. This is done in a logical-symbolic and formal way. On the other hand, Calculus deals with quantities that vary in magnitude, rate of change and accumulation. The quantities covary with each other and have dimensions and units.

Who invented mathematical analysis? The modern foundations of mathematical analysis were established in 17th century Europe. This began when Fermat and Descartes developed analytic geometry, which is the precursor to modern calculus. Fermat's method of adequality allowed him to determine the maxima and minima of functions and the tangents of curves.

The undergraduate program is designed so that students become familiar with each of these areas.
