What is the Che Diaries of Ernesto Che Guevara about? Brief summary The Motorcycle Diaries by Ernesto Che Guevara is a captivating memoir that chronicles Guevara's transformative journey across South America. It offers profound insights into the social and political realities of the continent.

Why did Che Guevara go to the Congo? Che entered the Congo with the dream of continuing the communist revolution on another front.

What was the dark side of Che Guevara? Between 1959 and 1963, approximately 500 men were killed under his watch. Many individuals imprisoned at La Cabaña, including human rights activist Armando Valladares, allege that Guevara took a personal interest in the interrogation, torture, and execution of political prisoners.

Was Che Guevara ever in Africa? In April 1965 Guevara, the second most important figure of the Cuban revolution, disappeared from public view. Unknown at the time, he had travelled clandestinely to the Congo to lead a guerrilla force in support of the Congolese rebels struggling against Moise Tshombe's government.

What illness did Che Guevara suffer? In mid-January 1959, Guevara went to live at a summer villa in Tarará to recover from a violent asthma attack. While there he started the Tarará Group, a group that debated and formed the new plans for Cuba's social, political, and economic development.

Why did they shoot Che Guevara? It was an armed insurrection, i.e. Guevara was foreigner killing Bolivian soldiers. When he was captured (he didn't go down in a blaze of glory, as one would presume a guerrilla warrior would) by the Bolivian

military and the CIA operatives that were assisting the Bolivians, he was executed.

How did Che Guevara get captured? After some initial combat successes, Guevara and his guerrilla band found themselves constantly on the run from the Bolivian army. On October 8, 1967, the group was almost annihilated by a special detachment of the Bolivian army aided by CIA advisers. Guevara, who was wounded in the attack, was captured and shot.

What did Che Guevara do to Cuba? Guevara joined Castro's '26th July Movement' and played a key role in the eventual success of its guerrilla war against Cuban dictator Fulgencio Batista. Castro overthrew Batista in 1959 and took power in Cuba. From 1959-1961, Guevara was president of the National Bank of Cuba, and then minister of industry.

What were Che Guevara's last words? a military transport plane from Santa Cruz, together with Admiral Ugarteche, commander-in-chief of the Bolivian navy, who said: "I have been told that Ché's last words were: 'I am Ché. Don't kill me. I have failed.

Why do people tattoo Che Guevara? This allows Che to operate as "both a fashionable de-politicized logo, as well as a potent anti-establishment symbol used by a wide spectrum of human rights movements and individuals affirming their own liberation."

Why do people wear Che Guevara tshirts? Aleida Guevara, the eldest daughter of Che Guevara, has defended the fashion trend derived from her father's image, saying, "But look at the people who wear Che T-shirts. They tend to be those who don't conform, who want more from society, who are wondering if they can be better human beings.

Who took the original image of Che Guevara? Guerrillero Heroico (English: "Heroic Guerrilla Fighter") is an iconic photograph of Marxist revolutionary Che Guevara taken by Alberto Korda. It was captured on March 5, 1960, in Havana, Cuba, at a memorial service for victims of the La Coubre explosion.

Why did Che go to Congo? It was later learned that he had traveled to what is now the Democratic Republic of the Congo with other Cuban guerrilla fighters in what proved to be a futile attempt to help the Patrice Lumumba Battalion, which was

fighting a civil war there.

What language did Che Guevara speak?

Was Che Guevara half Irish? Guevara was a descendent of Galway native, Patrick Lynch, born in 1715, and who in the aftermath of land confiscations in Ireland was said to have made his way to Buenos Aires in 1749 via Bilbao. Guevara's Irish roots are these days arguably well-known and his Irish heritage is now an accepted fact.

What is the story behind Che Guevara? Che Guevara was a prominent communist figure in the Cuban Revolution who went on to become a guerrilla leader in South America. Executed by the Bolivian army in 1967, he has since been regarded as a martyred hero by generations of leftists worldwide.

What does Che mean as in Che Guevara? He was nicknamed "Che" by his Cuban comrades because of his frequent use of the Argentinian slang word "che" which can mean "pal" or "Hey!". Revered by many as a revolutionary freedom fighter, Che Guevara is considered as a Stalinist by some of his opponents.

Who was Che Guevara what was he fighting for? Ernesto "Che" Guevara de la Serna, the controversial Marxist revolutionary and guerrilla leader, was a central figure in the Cuban Revolution, serving as second in command to Fidel Castro.

What does Che Guevara's image represent? For many around the world, Che has become a generic symbol of the underdog, the idealist, the iconoclast, or the martyr. He has become, as author Michael Casey notes in *Che's Afterlife: The Legacy of an Image*, "the quintessential postmodern icon signifying anything to anyone and everything to everyone."

What is the answer for digestive system? The digestive system converts the foods we eat into their simplest forms, like glucose (sugars), amino acids (that make up protein) or fatty acids (that make up fats). The broken-down food is then absorbed into the bloodstream from the small intestine and the nutrients are carried to each cell in the body.

Which of the following is a part of digestive system answer? They are: your mouth, esophagus, stomach, small intestine, large intestine and anus. Assisting your GI organs along the way are your pancreas, gallbladder and liver. Here's how these organs work together in your digestive system.

What is the digestive system in the world? The digestive system is a long, twisting tube that starts at the mouth and goes through the oesophagus, stomach, small intestine, large intestine and ends at the anus. The digestive system breaks down food into simple nutrients such as carbohydrates, fats and proteins.

Which is the digestive system in our body? The digestive system is made up of the gastrointestinal tract—also called the GI tract or digestive tract—and the liver, pancreas, and gallbladder. The GI tract is a series of hollow organs joined in a long, twisting tube from the mouth to the anus.

What is digestion short answer? Digestion is the process of mechanically and enzymatically breaking down food into substances for absorption into the bloodstream. The food contains 3 macronutrients that require digestion before they can be absorbed: fats, carbohydrates, and proteins.

What are the 7 steps of digestion? The processes of digestion include seven activities: ingestion, propulsion, mechanical or physical digestion, chemical digestion, secretion, absorption, and defecation. The first of these processes, ingestion, refers to the entry of food into the alimentary canal through the mouth.

What is the main function of the digestive system? The function of the digestive system is to digest and absorb food and then excrete the waste products with the help of the liver, gallbladder, pancreas, small intestine, large intestine, and rectum. Each of these organs plays a specific role in the digestive system.

What are the main parts of the digestive system answer? These organs include the mouth, pharynx (throat), esophagus, stomach, small intestine, large intestine, rectum, and anus. The digestive tract is part of the digestive system.

How does the digestive system work step by step? How does digestion work? Digestion works by moving food through the GI tract. Digestion begins in the mouth with chewing and ends in the small intestine. As food passes through the GI tract, it mixes with digestive juices, causing large molecules of food to break down into smaller molecules.

How to improve digestion?

How long does food take to digest? After you eat, it takes about six to eight hours for food to pass through your stomach and small intestine. Food then enters your large intestine (colon) for further digestion, absorption of water and, finally, elimination of undigested food. It takes about 36 hours for food to move through the entire colon.

Where is your bowel located? The bowel is the lower part of the digestive system. The digestive system is also called the gut or gastrointestinal tract (or the GI tract or GIT for short). The bowel goes from the stomach to the back passage (anus). It is a hollow muscular tube.

Which organs make up digestive system? The digestive system includes the mouth, pharynx (throat), esophagus, stomach, small intestine, large intestine, rectum, and anus. It also includes the salivary glands, liver, gallbladder, and pancreas, which make digestive juices and enzymes that help the body digest food and liquids.

Where does food go after the stomach? Once the stomach completes its role in the digestive process, its contents slowly pass into a short tube at the base of the stomach. This is called the duodenum. It's the first part of the small intestine.

How long are the bowels? The large bowel (colon) is about 2m long and 6-7 cm wide. This muscular tube is made up of the ascending colon, the transverse colon and the descending colon which ends at the rectum and the anus. The colon's most important job is to store, process and get rid of waste. The colon also absorbs some nutrients and water.

What is the process of digestion in the human body? Digestion Process The process of digestion begins from the mouth and ends in the small intestine – the large intestines' main function is to absorb the remaining water from the undigested food and enable bacterial fermentation of materials that can no longer be digested.

What is digestive system one word answer? The digestive system is made up of: the alimentary canal (also called the digestive tract). This long tube of organs makes a pathway for food to travel through the body. It runs from the mouth to the anus (where poop comes out) and includes the esophagus, stomach, and intestines.

Where is your stomach located in your body? Your stomach sits in your upper abdomen on the left side of your body. The top of your stomach connects to a valve called the esophageal sphincter (a muscle at the end of your esophagus). The bottom of your stomach connects to your small intestine.

Which nutrient takes the longest to digest? These nutrients also differ in how quickly they supply energy. Carbohydrates are the quickest, and fats are the slowest. Carbohydrates, proteins, and fats are digested in the intestine, where they are broken down into their basic units: Carbohydrates into sugars.

Which organ produces bile? Bile is a fluid that is made and released by the liver and stored in the gallbladder. Bile helps with digestion.

How do intestines work? The intestines are responsible for breaking food down, absorbing its nutrients and solidifying the waste. The small intestine is the longest part of the GI tract, and it is where most of your digestion takes place.

What is the main function of the digestive system answer? The function of the digestive system is to digest and absorb food and then excrete the waste products with the help of the liver, gallbladder, pancreas, small intestine, large intestine, and rectum. Each of these organs plays a specific role in the digestive system.

What are the main parts of the digestive system answer? These organs include the mouth, pharynx (throat), esophagus, stomach, small intestine, large intestine, rectum, and anus. The digestive tract is part of the digestive system.

What are the 5 steps of the digestive system? Figure 2: The digestive processes are ingestion, propulsion, mechanical digestion, chemical digestion, absorption, and defecation.

What is the digestive system Kid definition? The digestive system consists of the parts of the body that work together to turn food and liquids into the building blocks and fuel that the body needs.
