Introduction:

Structural analysis involves determining the forces and deformations in structures under various loads and conditions. Hibbeler's "Structural Analysis" textbook provides a thorough foundation in this field, and its 6th edition solution manual offers detailed solutions to all end-of-chapter problems.

Question 1: Determine the shear and moment diagrams for a simply supported beam with a concentrated load at mid-span.

Answer:

The shear diagram is a triangle with a maximum value of $P/2$ at the load point. The moment diagram is a parabola with a maximum value of $PL/8$ at the center of the beam.

Question 2: Analyze a truss with multiple members to determine the axial forces in each member.

Answer:

Use the method of sections to cut through the truss and solve for the unknown forces. The solution manual provides step-by-step calculations for each member.

Question 3: Calculate the deflections of a cantilever beam under a uniformly distributed load.

Answer:
