**What is naming process in chemistry?** Chemists use nomenclature rules to clearly name compounds. Ionic and molecular compounds are named using somewhat-different methods. Binary ionic compounds typically consist of a metal and a nonmetal. The name of the metal is written first, followed by the name of the nonmetal with its ending changed to -ide.

**Is naming reaction important for NEET?** Name reaction of organic chemistry is important for all entrance exams like JEE and NEET .

**Is name reaction enough for jee mains?** I'd say that's enough! But you'll also have to have an dear about the basics of isomerism,nomenclature and balancing of reactions. (Everything involves in the ration mechanism). But as far as I've seen majority will be from inorganic in JEE main and organic in Advanced.

**What is Rosenmund reaction class 12?** Rosenmund Reduction is an organic reaction where acyl chlorides are selectively reduced into aldehyde in the presence of palladium catalyst poisoned with barium sulphate.

**What is the Sandmeyer reaction Class 12?** The Sandmeyer reaction is a chemical reaction used to synthesize aryl halides from aryl diazonium salts using copper salts as reagents or catalysts. It is an example of a radical-nucleophilic aromatic substitution.
