The Narcissistic Family: Diagnosis and Treatment

by Stephanie Donaldson Pressman

What is the narcissistic family?

The narcissistic family is a family system in which one or both parents exhibit narcissistic personality disorder (NPD). NPD is a mental disorder characterized by an inflated sense of self-importance, a lack of empathy for others, and a need for admiration. People with NPD often have difficulty forming healthy relationships, and they may be manipulative, controlling, and exploitative.

How does the narcissistic family affect children?

Children who grow up in narcissistic families may experience a range of negative outcomes, including:

- Low self-esteem
- Difficulty forming healthy relationships
- Anxiety and depression
- Substance abuse
- Eating disorders
- Personality disorders

How is the narcissistic family diagnosed?

The narcissistic family is diagnosed by a mental health professional, such as a psychologist or psychiatrist. The diagnosis is based on the following criteria:

VOICE

- One or both parents meet the criteria for NPD.
- The children in the family exhibit symptoms of emotional distress, such as anxiety, depression, or low self-esteem.
- The family system is characterized by manipulation, control, and exploitation.

How is the narcissistic family treated?

Treatment for the narcissistic family typically involves therapy for both the parents and the children. The goal of therapy is to help the parents understand their NPD and its impact on their family, and to help the children develop healthy coping mechanisms. Treatment may also include medication to manage symptoms such as anxiety or depression.

What is the prognosis for the narcissistic family?

The prognosis for the narcissistic family is variable. Some families are able to recover and build healthy relationships, while others continue to struggle. The prognosis is influenced by a number of factors, including the severity of the NPD, the willingness of the parents to change, and the support system available to the family.
