Can I drive with the malfunction indicator lamp on? The warning light should stay on when the ignition is switched on and go off when the car is started. If that doesn't happen or the light comes on while you're driving, you should go to a mechanic as soon as possible to inspect the reason for the problem and avoid even bigger issues.

What would cause the malfunction indicator light to come on? Formally known as the malfunction indicator lamp, it is a signal from the vehicle's engine computer that something's wrong. The light could be a minor issue, such as a faulty gas cap, or it could mean something more serious, such as a misfiring engine.

Can I drive my car with the engine malfunction light on? If the EML light appears on your dashboard, then there is an issue that needs to be immediately addressed. Continuing to drive with the light on will likely lead to further damage to the engine and the surrounding systems – as well as an immediate drop in performance.

What does it mean when the engine malfunction light comes on? A red engine warning light indicates that there is a serious issue with the engine. You should pull over to the side of the road and turn off the engine as soon as it's safe to do so. Do not try to restart the engine as this could cause further damage. You will need to call for a recovery service.

What are some reasons if the malfunction indicator lamp will illuminate? The purpose of this warning light is to indicate a detected problem with the car and alert the driver about the issue. The OBD2 system illuminates the light when there is a problem with the car's engine, transmission or emission control system. The light turns on only for a reason and you should not ignore it.

What is the most common cause of the check engine light? Oxygen Sensor Malfunction One of the most common reasons your check engine light may come on is that your oxygen sensor is failing. Your local auto repair shop in Western Washington can replace it for you quickly, which will restore your vehicle's ability to measure unburned oxygen in its exhaust system.

How do I get rid of engine malfunction light? The on-off method is the equivalent fix for a vehicle's check engine light. It forces the computer to refresh its saved state through a reboot. Simply place your key into the ignition and turn it on for 1-2

seconds, then turn it off for 1-2 seconds. Repeat this step three or four times.

How do you reset a malfunction light? It will require a little elbow grease, but once you have the battery disconnected, leave it out for about fifteen minutes. You will then need to put your key into the ignition and turn it to the “on” position about three times. Ideally, this will clear the data, turning off the light.
