Solution of Managerial Accounting by Garrison 13th Edition

Question 1: What is the difference between cost accounting and managerial accounting?

Answer: Cost accounting focuses on the measurement and reporting of product and service costs for internal use by managers and other decision-makers within an organization. Managerial accounting, on the other hand, provides relevant information to support managerial planning, decision-making, and control activities.

Question 2: Explain the concept of cost-volume-profit analysis.

Answer: Cost-volume-profit (CVP) analysis is a tool that helps managers understand the relationship between costs, volume, and profit. It allows them to determine the break-even point, which is the level of sales at which the company neither makes a profit nor incurs a loss.

Question 3: What are the different types of standard costing systems?

Answer: There are two main types of standard costing systems: normal standard costing and ideal standard costing. Normal standard costing uses realistic and

achievable standards that are based on historical data or projected estimates. Ideal standard costing, on the other hand, uses theoretically perfect standards that are not likely to be achieved in practice.

Question 4: Discuss the role of variance analysis in managerial accounting.

Answer: Variance analysis is a technique used to compare actual costs to standard costs and identify areas where significant deviations have occurred. By analyzing these variances, managers can gain insights into cost performance and take corrective actions to improve efficiency and profitability.

Question 5: How can managerial accounting help organizations with budgeting?

Answer: Managerial accounting provides techniques for developing and managing budgets. Budgets help organizations allocate resources, set goals, and monitor performance. By using managerial accounting principles, organizations can create accurate and realistic budgets that support strategic decision-making and ensure financial stability.
