Instead we would suggest the mid-range 136bhp option as our pick over the more powerful 156bhp model.

What should my engine timing advance be? Most stock street engines call for 6 to 8 degrees of initial advance, but this is not set in stone. Engines with longer duration camshafts and other modifications often demand more initial timing. It's not unusual to input 14 to perhaps 18 degrees of initial timing for engines with big cams.
