The routine BMW scheduled maintenance list includes the following: Brake fluid check. Brake inspection, front and rear. Cabin air filter ...

**How reliable is the BMW F800ST?** Light (in comparison) and responsive, the F800ST has a strong parallel twin motor but for many its main selling point is the fact it is a very reliable do-it-all with practicality are the forefront of its design that is backed up by a good level of build quality and helpful accessories.

**What is a major service BMW?** It exceeds most manufacturer's service schedules and includes 77 checks and adjustments including an engine oil and oil filter change, air filter change, and a top up of brake fluid, power steering fluid and coolant.

**Which oil is best for F800ST?**

**How fast is a BMW F800ST?** If you commit to corners, it feels great and the brakes are superb. For me it's more than fast enough. I have red lined it a few times but it's capable of 130 mph + so how fast do you want to go?

**How often does my BMW need servicing?** BMW Servicing When your BMW needs a service can depend on the mileage it's done, or after a certain time – every 10,000 miles, for example, or once a year. But now, it's even easier than ever to manage your BMW service schedule.

**How often should BMW transmission fluid be changed?** For most manual transmissions, you should change your fluid every 30,000 to 60,000 miles; for most automatic transmissions, you should change your fluid every 60,000 to 100,000 miles.

**How many km is a BMW service schedule?**

**Who makes the BMW F800 engine?** The F800 twin engines are BMW's design built for BMW (and only BMW) by Rotax in Austria. The F series thumper engine was also built by Rotax and was based on a Rotax design which was common to Aprillia as well. Since being rebranded the G series, those engines are now built by BMW in China.

**What is the range of the F800ST tank?** Fill quickly until the pump "clunks" off. Withdraw the nozzle some and continue filling slowly while watching the fuel trickle in, stopping when it rises above the base of the filler neck. You'll get full capacity that way. I could regularly get a range of 350 km with my F800ST which is about 220 mi.

**How much does a BMW F800ST weight in kg?** The aim of producing a light responsive chassis has worked well, as the F800 S only weighs 182 kg dry (187 kg for the ST version.) To make the F800 S ownership as easy as the rest of the BMW range (while keeping weight to a minimum) the engineers have fitted a belt-drive system.

**How much is BMW full service?**

**What is the BMW maintenance schedule?** If you drive a new or used BMW, you likely have questions about when you should bring it in to an authorized BMW service center for maintenance. The standard you should follow is two to three times a year, or every 5,000 miles.

**Are BMWs expensive to maintain?** Yes, BMWs can be expensive to maintain, with the average annual maintenance cost being around \$968, according to RepairPal. While this is more expensive than standard vehicles, it's on par with the annual maintenance costs of luxury vehicles.

**Can I use 15w40 oil in my bike?** If you're going to run the bike hard and hot for long stretches, like on a track, then you need to use something equivalent to Motul 15w40 (or even 15w50) that has been specially formulated for bikes. I run Motul in all my racebikes.

**What is the difference between 15w50 and 10w40 motorcycle oil?** The 15–50 is thicker than the 10–40, but will also protect the engine better once warmed up. But most modern engines run on even thinner 0–40 grade oils, this is to lower emissions while the engine is cold. Depends what your climate is. 10w-40 is for cooler climate than 15w-50, or for a more worn motor.

**Which hydraulic oil do I need?** Hydraulic equipment used indoors under normal service conditions generally use a conventional antiwear hydraulic oil with the appropriate viscosity. The most commonly used viscosities are ISO 32, 46, or 68, since these are able to lubricate and protect the system under the normal range of operating temperatures.

**What is the difference between the BMW f800gt and the F800ST?** ST has about 20-30 more miles in range, (smaller tank on the GT possibly less mpg), non ABS available, around 10lbs lighter, with a 2 inch shorter wheelbase for snappier handling one up, with slightly higher pegs and seat for more lean angle.

**How many miles per gallon does a BMW F800ST get?** Based on data from 28 vehicles, 1,785 fuel-ups and 309,028 miles of driving, the 2008 BMW F800ST gets a combined Avg MPG of 53.21 with a 0.33 MPG margin of error.

**How much horsepower does a 2009 BMW F800ST have?** Back to the bike: Excellent fuel economy (65+ mpg highway), 85 hp, 135 mph top speed.

**When to change gearbox oil on BMW?** We would recommend this is completed every 60,000 miles to keep your transmission functioning at it's best and avoid costly rebuilds at a later date.

However, many manufacturers recommend changing your oil every 5,000 miles or 6 months (whichever comes first).

**How far can a BMW go without an oil change?** Even your BMW owner's manuals recommend an oil change every 15,000 miles. And on most BMW cars, the reminder lights on the instrument panel are set to remind the driver to change their oil at this time, too. But, changing your oil sooner can help prolong engine life and performance.

**How do you know when BMW needs oil change?** If you're comfortable using a dipstick to check your oil inside your BMW, you can see what color it is. **How much oil does a BMW 310r take?**

**Do BMW use a lot of oil?** Some amount of oil consumption has been reported on the B48 and B58 engines but it's not super common. My X3s had a slightly different engine (both M40i) but they didn't consume any oil at all between oil changes despite the fact that I drove them pretty hard.

**How much oil consumption is normal for BMW?** How much is too much? Audi, BMW, and Subaru stick firmly to the statement that oil consumption is a normal part of a car's operation. Subaru considers a quart burned every 1,000 to 1,200 miles to be acceptable. Certain Audi and BMW cars' standards state that a quart burned every 600 to 700 miles is reasonable.
