**What are the 2 classes of ECDIS?** There are two types of electronic navigational chart available for use in an ECDIS, the vector Electronic Navigational Chart (ENC) and the Raster Navigational Chart (RNC). There are distinct differences in the information available and how this is presented to the navigator from each type of chart.

**What is ENC and RNC in ECDIS?** There are two kinds of official digital charts commonly available: - Electronic Navigational Charts (ENC) - Raster Navigational Charts (RNC)

**How to delete ENC on JRC ECDIS?**

**What is the difference between s57 and s63 charts?** S-63 charts are encrypted charts in the S-57 file format that respect all the standards set by the International Hydrographic Organization (IHO). "S-63" Refers to the encryption standard under which the charts are protected.

**How do I find out if my ECDIS is up to date?** The easiest method to check if charts are up-to-date is to view the catalogue and check that the names of all required charts appear in green. ## **Solutions to Sears and Salinger Thermodynamics: Common Questions Answered**

### **1. What is the difference between an intensive and an extensive property?**

- **Answer:** An intensive property is one that does not depend on the amount of matter in a system, such as temperature and pressure. An extensive property is one that does depend on the amount of matter, such as mass and volume.

### **2. What is the first law of thermodynamics?**

- **Answer:** The first law of thermodynamics states that energy cannot be created or destroyed, only transferred or transformed. In other words, the total amount of energy in an isolated system remains constant.

### **3. What is the second law of thermodynamics?**

- **Answer:** The second law of thermodynamics states that the entropy of an isolated system always increases. Entropy is a measure of disorder or randomness, so the second law of thermodynamics means that isolated systems tend to become more disordered over time.

### **4. What is the third law of thermodynamics?**

- **Answer:** The third law of thermodynamics states that the entropy of a perfect crystal at absolute zero is zero. This means that perfectly ordered systems have no entropy.

### **5. What are some applications of thermodynamics?**

- **Answer:** Thermodynamics has many applications in science and engineering, including the design of heat engines, refrigerators, and air conditioners. It is also used to study chemical reactions, phase transitions, and the behavior of materials.
