**What is EN 12004?** As per the Standard BS EN 12004, the cementitious tile adhesive (C) has to achieve minimum adhesion results at the following curing conditions, besides specific open time to be classified against the standard. Tensile Strength of Tile Adhesives – C1 / C2. Characteristic. C1 (Min. Adhesion - Mpa)

**What is BS EN 12004 2017?** BS EN 12004-1 is useful in determining the characteristics of adhesives. These characteristics helps in identifying the performance of these adhesives when the fire takes place. With the help of BS EN 12004-1, you can resist the chemical attack made on ceramic tile by using adhesives.

**What is the difference between Type 1 and Type 2 adhesive?** Type I adhesive is more water resistant and must pass boiling water submersion, oven drying and cold water submersion cycles, whereas Type II adhesive is less water resistant, however must pass cold water submersion and oven drying cycles. Type I adhesive is intended for Exterior and Interior applications.

**What are BS EN and ISO standards?** BS = British Standard (published by the British Standards Institution – BSI, London), EN = European Standard (published by the European Committee for Standardisation – CEN, Brussels), ISO = International Standard (published by the International Organisation for Standardisation – ISO, Geneva).

**What is bs en iso 10545 2 2018?** BS EN ISO 10545-2:2018 specifies methods for determining the dimensional characteristics (length, width, thickness, straightness of sides, rectangularity, surface flatness) and the surface quality of ceramic tiles.

**What is BS EN ISO 10545 3 2018?** ISO 10545-3:2018 specifies a method for determining water absorption, apparent porosity, apparent relative density and bulk density of ceramic tiles. This method is applicable to classification of tiles and product specifications.

**What is Type 2 adhesive?** Type 2 adhesive is ideal for tiles with low porosity, including vitrified or fully vitrified tiles, glass mosaic tiles, and dense stones. It is recommended for interior and exterior applications, including wet and submerged

areas. This adhesive offers enhanced bonding strength and stability for demanding installations.

**What is Type I vs Type II glue?** Type 1 is basically fully waterproof. Type 2 is water resistant. Both can also withstand a bit of heating without failure. In either case, unless the glued wood product will be used outdoors or is subject to frequent wetting, either type will work well for furniture, cabinets, and similar.

**What is Type 1 adhesive?** Type 1 is a premium-grade, traditional, nonflammable, acrylic adhesive for setting glazed and unglazed ceramic and porcelain tiles on walls, floors and countertops. This adhesive is used for interior applications only.

**What is the difference between S1 and S2 tile adhesive?** Similarly, to S1 adhesives, S2 products are designed with flexibility in mind. The difference being the amount of deformability the product allows. Typically, an S2 allows for 5mm or more deformability, for example the BAL Fast Flex allows for movement of up to 20mm, one of the best available.

**What is C1 and C2 in adhesive?** C1 Adhesive denotes a standard adhesion strength suitable for areas that do not experience heavy stress. C1 adhesives are typically used for wall and floor tiling in residential projects where the demands on the adhesive are not excessively high. C2 Adhesive represents adhesives with improved or high adhesion strength.

**What is tile adhesive classification?** Types of Tile Adhesives Classified as Type 1, Type 2, Type 3, Type 4, and Type 5, they are defined and distinguished based on the following three aspects: Chemistry – Dispersion, reactive resin, and cementitious. Performance – Regular or improved/heavy duty.

**What is type 2 tile adhesive?** Type 2 Adhesive It is recommended for interior and exterior applications, including wet and submerged areas. This adhesive offers enhanced bonding strength and stability for demanding installations.

**Can you predict stock prices using machine learning?** With recent research trends, a popular approach is to apply machine learning algorithms to learn from historical price data, thereby being able to predict future prices. The scale demonstrates predictive power on historical stock price data that outperforms other

methods due to its suitability for this data type.

**How machine learning is used in stock market trading?** An area of research called machine learning (ML) employs algorithms to discover patterns and insights automatically from data. Machine learning can be utilised to make knowledgeable investing selections when trading on the Indian stock market by forecasting stock patterns based on past data.

**Which AI is best for stock price prediction?** AI-based high-frequency trading (HFT) emerges as the undisputed champion for accurately predicting stock prices. The AI algorithms execute trades within milliseconds, allowing investors and financial institutions to capitalize on minuscule price discrepancies.

**What are the applications of machine learning in financial markets?** In finance, machine learning algorithms are used to detect fraud, automate trading activities, and provide financial advisory services to investors. Machine learning can analyze millions of data sets within a short time to improve the outcomes without being explicitly programmed.

**What is the best algorithm for predicting stock prices?** LSTM (Long Short-term Memory) is one of the extremely powerful algorithms for time series. It can catch historical trend patterns & predict future values with high accuracy.

**Can ChatGPT predict stocks?** A study by scholars from the University of Chicago found that ChatGPT can outperform human analysts in predicting stock earnings, as reported by The Financial Times. It is the beginning of the artificial intelligence (AI) world and we are all living in it.

**How to use AI for stock trading?** Managing Trades With AI For example, an AI-driven system can be programmed to do the following: Buy a stock when it meets the conditions you set. Manage exit strategies using conditional orders. Carry out stop-loss orders or take-profit levels based on real-time market conditions.

**What is the formula for predicting stock price?** This method of predicting future price of a stock is based on a basic formula. The formula is shown above ( $P/E \times EPS = \text{Price}$ ). According to this formula, if we can accurately predict a stock's future P/E and EPS, we will know its accurate future price.

## **How good is machine learning for trading?**
