Solutions to Cost Accounting 9th Edition: Clarifying Common Queries

Question 1: What are the key differences between Job Order Costing and Process Costing?

Answer: Job Order Costing assigns costs directly to individual units or jobs, while Process Costing accumulates costs for a period of time and then assigns them to units produced during that period. Job Order Costing is suitable for products with low production volume and high customization, while Process Costing is used for products with high production volume and standardized processes.

Question 2: How do you calculate Equivalent Units of Production?

Answer: Equivalent Units of Production (EUP) represent the number of completed units that could have been produced given the materials used and the labor hours incurred during the period. To calculate EUP, you multiply the number of units in work-in-process (WIP) at the end of the period by their percentage of completion.

Question 3: What is the purpose of a Cost Reconciliation Report?

Answer: A Cost Reconciliation Report compares actual costs to budgeted or standard costs. It helps identify cost variances, which are useful for analyzing cost performance and taking corrective actions. Cost variances can arise due to differences in materials usage, labor efficiency, or overhead expenses.

Question 4: How do you calculate Overhead Application Rates?

Answer: Overhead Application Rates are used to allocate overhead costs to cost objects. To calculate these rates, you divide the estimated overhead costs by the selected allocation base, which can be direct labor hours, direct labor costs, or machine hours.

Question 5: What is the Direct Method for Allocating Service Department Costs?

Answer: The Direct Method allocates service department costs directly to other departments based on their actual usage of the service department's resources. This method is more accurate but can be complex and time-consuming to implement.
