Understanding Mechanics Sadler Answers Unit 3

Paragraph 1:

Question 1: What is the relationship between force, mass, and acceleration?

Answer: According to Newton's second law of motion, force (F) is directly proportional to mass (m) and acceleration (a): $F = ma$.

Question 2: An object has a mass of 5 kg and experiences a force of 10 N. What is its acceleration? **Answer:** Using Newton's second law, $a = F/m = 10 \text{ N} / 5 \text{ kg} = 2 \text{ m/s}^2$.

Paragraph 2:

Question 3: What is the difference between static and kinetic friction? **Answer:** Static friction acts on an object at rest, preventing it from moving. Kinetic friction acts on an object in motion, opposing its movement.

Question 4: A block slides down a ramp with a coefficient of kinetic friction of 0.2. What is the acceleration of the block? **Answer:** The acceleration (a) down the ramp due to gravity (g) and friction (f) is $a = g - f/m$, where m is the block's mass.

Paragraph 3:

Question 5: What is centrifugal force? **Answer:** Centrifugal force is a fictitious force that appears to act on an object moving in a circular path, pushing it away from the center. It is not a real force but rather a consequence of the object's inertia.

Question 6: A car travels around a curve of radius 50 m at a speed of 10 m/s. What is the centrifugal force acting on the car? **Answer:** The centrifugal force (F) is calculated as $F = mv^2/r = (5 \text{ kg})(10 \text{ m/s})^2 / 50 \text{ m} = 10 \text{ N}$.

Paragraph 4:

Question 7: What is the principle of conservation of momentum? **Answer:** The principle of conservation of momentum states that the total momentum of a system remains constant as long as no external forces act on the system.

Question 8: Two cars, each with a mass of 1000 kg, collide head-on with equal and opposite velocities of 20 m/s. What is the velocity of the cars after the collision? **Answer:** Since the total momentum remains zero, the velocity of the cars after the collision is 0 m/s.

Paragraph 5:

Question 9: What is the work-energy theorem? **Answer:** The work-energy theorem states that the net work done on an object is equal to the change in its kinetic energy.

Question 10: A ball with a mass of 2 kg is thrown vertically upward with an initial velocity of 10 m/s. How high will the ball rise? **Answer:** Using the work-energy theorem and setting the velocity at the maximum height to zero, we can find the height (h) reached by the ball: $h = v^2/2g = (10 \text{ m/s})^2 / (2 * 9.8 \text{ m/s}^2) \approx 5.1 \text{ m}$.
