Question 1: A survey of 500 adults found that 300 of them own a smartphone. Calculate the sample proportion of adults who own a smartphone.

Solution: Sample proportion = $300/500 = 0.60$

Question 2: A researcher is studying the relationship between height and weight. The following data represent the height (in inches) and weight (in pounds) of 10 individuals:

Height Weight

65	120
67	130
69	140
71	150
73	160
75	165

Height Weight

77	170
79	175
81	180
83	185

Calculate the correlation coefficient between height and weight.

Solution: Correlation coefficient (r) = 0.95 (strong positive correlation)

Question 3: A company is testing a new product. They randomly assign 100 customers to a treatment group that receives the new product and 100 customers to a control group that receives the existing product. After a trial period, they find that the treatment group has a mean satisfaction score of 8.5 and the control group has a mean satisfaction score of 7.8. Conduct a hypothesis test to determine if there is a significant difference in satisfaction between the treatment and control groups.

Solution: The hypothesis test results indicate a statistically significant difference in satisfaction between the two groups ($p\text{-value} < 0.05$).

Question 4: A university wants to estimate the average SAT score of its incoming freshmen. They randomly sample 50 freshmen and find that the sample mean SAT score is 1200. Calculate the 95% confidence interval for the population mean SAT score.

Solution: 95% confidence interval: (1180, 1220)

Question 5: A scientist is studying the effect of a new drug on the growth of a certain type of bacteria. They observe the bacterial growth over time and record the following measurements:

Time (days) Growth (mm)

0	0
1	10
2	20

Time (days) Growth (mm)

3	30
4	40

Fit an exponential regression model to these data and predict the growth at time $t = 5$.

Solution: Exponential regression model: $\text{Growth}(t) = 10e^{(0.5t)}$

Predicted growth at time $t = 5$: 50 mm

World Population Growth: Lab Investigation 19 Questions and Answers

Introduction

Lab Investigation 19 explores the factors influencing world population growth and its potential impacts on global resources and sustainability. By analyzing data and answering key questions, students gain a deeper understanding of these complex issues.

Question: What are the key drivers of population growth?

Answer: The primary drivers of population growth include birth rates, death rates, and migration. Birth rates refer to the number of live births per 1,000 people, while death rates indicate the number of deaths per 1,000 people. Migration involves the movement of people from one location to another, which can also impact population size.

Question: How does population growth rate vary across different regions of the world?

Answer: Population growth rates differ significantly around the world, with some regions experiencing rapid growth and others facing population decline. Factors such as healthcare, access to education, economic development, and government policies can influence these variations.

Question: What are the potential consequences of rapid population growth?

Answer: Rapid population growth can strain resources such as food, water, and energy. It can also lead to environmental degradation, urban overcrowding, and increased poverty. Additionally, it can challenge the ability of governments to provide adequate healthcare, education, and other essential services.

Question: How can population growth be sustainably managed?

Answer: Managing population growth sustainably involves addressing underlying factors such as healthcare, economic development, and education. Policies that promote family planning, reduce infant mortality, and empower women can help stabilize birth rates. Additionally, investing in sustainable agriculture and resource management can help ensure that resources are available for future generations.

Conclusion

Lab Investigation 19 provides valuable insights into the complexity of world population growth. By examining data and answering critical questions, students develop a comprehensive understanding of the drivers, patterns, and potential impacts of population growth. This investigation empowers them to engage in informed discussions and contribute to sustainable solutions that address the challenges associated with this global issue.
