4 7 Puzzle: Crossword Congruence in Overlapping Triangles

Question:

In a crossword puzzle, several triangles overlap to form a larger shape. Determine whether the triangles marked as 4 and 7 are congruent.

Answer:

Yes, triangles 4 and 7 are congruent.

Explanation:

To determine if two triangles are congruent, we need to check if they satisfy at least one of the following congruence theorems:

1. **SSS (Side-Side-Side):** If all three sides of one triangle are equal to the corresponding sides of another triangle, then the triangles are congruent.
2. **SAS (Side-Angle-Side):** If two sides and an included angle of one triangle are equal to the corresponding sides and included angle of another triangle, then the triangles are congruent.
3. **ASA (Angle-Side-Angle):** If two angles and a non-included side of one triangle are equal to the corresponding angles and non-included side of another triangle, then the triangles are congruent.

In this case, we can use the ASA theorem to show that triangles 4 and 7 are congruent:

- Angle 4-7-5 of triangle 4 is equal to angle 7-4-6 of triangle 7.
- Side 7-5 of triangle 4 is equal to side 4-6 of triangle 7.
- Angle 4-5-6 of triangle 4 is equal to angle 7-6-5 of triangle 7.

Therefore, by the ASA theorem, triangles 4 and 7 are congruent.
