The Pythagorean Theorem Assignment: Answers for a Clear Understanding

Question 1: What is the Pythagorean Theorem?

Answer: The Pythagorean Theorem states that in a right triangle, the square of the hypotenuse (the longest side) is equal to the sum of the squares of the other two sides. Mathematically, it is represented as: $c^2 = a^2 + b^2$ where c is the hypotenuse and a and b are the other two sides.

Question 2: What are some real-life applications of the Pythagorean Theorem?

Answer: The Pythagorean Theorem has numerous applications in everyday life, including:

- Architecture and construction: Determining the heights of buildings and distances between structures.
- Surveying and navigation: Calculating distances based on known angles and side lengths.
- Engineering: Designing load-bearing structures and bridges.

Question 3: Solve for the missing side in a right triangle where the legs are 3 cm and 4 cm long.

Answer: Using the Pythagorean Theorem, $c^2 = a^2 + b^2 = 3^2 + 4^2 = 9 + 16 = 25$. Therefore, $c = \sqrt{25} = 5$ cm.

Question 4: A rectangular garden measures 6 m by 8 m. What is the length of the diagonal path across the garden?

Answer: The diagonal of the garden forms a right triangle with the sides 6 m and 8 m. Using the Pythagorean Theorem, $c^2 = a^2 + b^2 = 6^2 + 8^2 = 36 + 64 = 100$. Therefore, **$c = \sqrt{100} = 10$ m.**

Question 5: Prove the Pythagorean Theorem using the area of squares.

Answer: Construct a square with side length c . Within this square, construct four right triangles with sides a and b . The area of these four triangles is $2ab$. The area of the remaining smaller square is $c^2 - 2ab$. Since the area of the large square is equal to the sum of the areas of all the smaller squares, we have: $c^2 = a^2 + b^2 + 2ab + c^2 - 2ab$, which simplifies to **$c^2 = a^2 + b^2$.**
