What is the difference between international humanitarian law and the law of armed conflict? IHL is also known as "the law of war" or "the law of armed conflict". IHL is part of public international law, which is made up primarily of treaties, customary international law and general principles of law (see Article 38 of the Statute of the International Court of Justice).

What is the role of international humanitarian law in armed conflict? International humanitarian law regulates the treatment of the wounded and prohibits attacks against civilians and the use of certain weapons. It also ensures the protection of non-combatants; Red Cross/Red Crescent and medical personnel; and prisoners of war.

What are the basic rules of international humanitarian law in armed conflicts?

What are the 4 principles of the law of armed conflict? All personnel must be aware of the basic rules of the law of armed conflict, including the practical application of the principles of military necessity, proportionality, distinction and humanity.

What is the difference between IHR and IHL? IHL applies in armed conflict, while human rights law applies at all times, in peace and in war. Both IHL and human rights law apply in armed conflicts. The main difference in their application is that international human rights law allows a state to suspend certain human rights if it is facing an emergency.

What is a serious violation of international humanitarian law? Violations are serious, and are war crimes, if they endanger protected persons (e.g. civilians, prisoners of war, the wounded and sick) or objects (e.g. civilian objects or infrastructure) or if they breach important values. The majority of war crimes involve death, injury, destruction or unlawful taking of property.

What situations does international humanitarian law apply to? International humanitarian law applies only in situations of armed conflict. IHL differentiates between two types of armed conflicts, namely international armed conflicts and non-international armed conflicts.

Who enforces international humanitarian law? Monitoring of respect for IHL is done by different actors, such as the warring parties themselves, protecting powers, the International Committee of the Red Cross (ICRC), international fact finding and enquiry missions, United Nations Special Procedures, and treaty monitoring bodies.

What are the limitations of international humanitarian law? IHL has its limitations. Since international humanitarian law does not prohibit the use of violence, it cannot protect everyone affected by armed conflict, nor does it try to.

What are the 7 principles of international humanitarian law? Humanity, impartiality, neutrality, independence, voluntary service, unity and universality: these seven Fundamental Principles sum up the Movement's ethics and are at the core of its approach to helping people in need during armed conflict, natural disasters and other emergencies.

What are the requirements for international armed conflict? An international armed conflict arises when one State uses armed force against another State or States. The term also applies to all cases of total or partial military occupation, even if the occupation meets with no armed resistance.

Who is protected in an armed conflict? International humanitarian law protects a wide range of people and objects during armed conflict. The Geneva Conventions and their Additional Protocols protect sick, wounded and shipwrecked people not taking part in hostilities, prisoners of war and other detainees, civilians and civilian objects.

What is the difference between international and national armed conflict? Therefore, the key distinction between the two types of conflicts appears to be the parties involved in the conflict. Hence, if the armed conflict is between two or more States, it will be classified as international, whereas if one of the parties is non-State in character, it will be classified as non-international.

What is the difference between ICL and IHL? IHL has traditionally been about state responsibility, to ensure that state armed forces behave in accordance with the rules that states themselves create. Individual responsibility under these treaties, which leads into ICL, has until relatively recently been a secondary and rarely used tool for implementation.

What is the international human rights law in armed conflict? The principal purpose of IHL is to protect the life, health and human dignity of civilians and combatants no longer involved in hostilities (captured, wounded or sick combatants), and to limit the rights of parties in conflict to use methods of warfare of their choice.

What is the difference between IAC and NIAC? Type of conflict International law recognizes only two types of armed conflict: international armed conflict (IAC) and non-international armed conflict (NIAC). Amongst other criteria, situations of violence may be classified as either IAC or NIAC depending on the nature of the actors involved.
