Who should not use an HSA? HSAs might not make sense if you have some type of chronic medical condition. In that case, you're probably better served by traditional health plans. HSAs might also not be a good idea if you know you will be needing expensive medical care in the near future.

Can I cash out my HSA? Yes. You can take money out any time tax-free and without penalty as long as it is used to pay for qualified medical expenses. If you take money out for other purposes, however, you will pay income taxes on the withdrawal plus a 20% tax penalty.

What is the difference between a health savings account and medical spending account? FSAs have lower contribution limits, cannot roll over from one year to the next, and the accounts are less flexible because they are owned by your employer. HSAs must be paired with a high-deductible health plan, so they can become costly if you have significant medical expenses.

What is the difference between a health savings account and a health retirement account? HRAs are funded entirely by the employer, and the contributions are tax-free for the employer.
