World Energy Outlook 2017: IEA Q&A

Q1: What are the key findings of the World Energy Outlook 2017 (WEO 2017)?

A: The WEO 2017 projects that global energy demand will increase by 30% by 2040. Fossil fuels will remain the dominant source of energy, but renewables will grow rapidly, driven by falling costs and government policies. The outlook also warns that current policies are not sufficient to meet the Paris Agreement goals of limiting global warming to well below 2°C.

Q2: How does WEO 2017 assess the role of different energy sources in the future?

A: Fossil fuels will continue to play a major role in the global energy mix, but their share is projected to decline from 81% today to 73% by 2040. Renewables, led by solar and wind, will grow rapidly, increasing their share from 20% to 31%. Nuclear power is expected to remain stable, while the use of bioenergy and waste will also increase.

Q3: What are the challenges and opportunities for transitioning to a more sustainable energy system?

A: The transition to a more sustainable energy system faces several challenges, including the need for large investments in new infrastructure, the integration of variable renewables into the grid, and the phasing out of fossil fuels. However, there are also significant opportunities, such as the creation of new jobs, the improvement of air quality, and the reduction of greenhouse gas emissions.

Q4: What are the implications of WEO 2017 for policymakers?

A: The WEO 2017 provides a clear warning that current policies are insufficient to meet the Paris Agreement goals. Policymakers need to take urgent action to accelerate the transition to a more sustainable energy system. This includes investing in low-carbon technologies, reforming energy markets, and providing incentives for consumers to adopt energy-efficient products and services.

Q5: What are the key messages from WEO 2017?

A: The WEO 2017 sends five key messages:

1. Global energy demand will continue to grow, but the pace of growth will slow.
2. Fossil fuels will remain the dominant energy source, but renewables will grow rapidly.
3. The transition to a more sustainable energy system is technically feasible, but it requires urgent action.
4. Policymakers need to play a key role in accelerating the transition to a more sustainable energy system.
5. The transition to a sustainable energy system is essential for achieving the Paris Agreement goals and creating a prosperous and sustainable future.
