Sample Questions and Solutions

Here are two sample questions and solutions from the Young and Freedman 13th Edition Solutions Manual:

Question 1: A ball is thrown vertically upward with an initial velocity of 15 m/s. What is the maximum height reached by the ball?

Solution:

- Use the equation: $v^2 = u^2 + 2as$
- At maximum height, $v = 0$
- Therefore, $0^2 = 15^2 + 2(-9.81)h$
- Solving for h gives: $h = 11.8 \text{ m}$

Question 2: A block of mass 5 kg is sliding down a frictionless inclined plane that makes an angle of 30° with the horizontal. What is the acceleration of the block down the plane?

Solution:

- Use the equation: $a = g \sin \theta$
- Substituting the given values: $a = 9.81 \sin 30^\circ = 4.91 \text{ m/s}^2$

Don't Make Me Think: 5 Key Usability Principles

Steve Krug's "Don't Make Me Think" is a seminal work on usability engineering. The book emphasizes the importance of creating websites and applications that are easy to use and understand. Here are five key usability principles outlined in the book:

1. Obviousness: Users shouldn't have to guess or search for what they need to do. Make it clear what the purpose of each page and element is. Use clear language and visual cues to guide users.

2. Affordance: Objects should indicate their purpose and how to interact with them. For example, a button should look like something clickable, and an input field should be clearly marked to indicate it accepts text.

3. Consistency: Maintain consistency throughout your website or application. Use similar navigation menus, page layouts, and terminology across different pages. This helps users feel comfortable and reduces confusion.

4. Feedback: Provide feedback to users when they interact with your interface. This could be a confirmation message after submitting a form or a visual cue indicating a task is being processed. Feedback gives users confidence that their actions are recognized.

5. Error Prevention: It's impossible to completely eliminate errors, but you can design your interface to prevent common mistakes. For example, use validation to check for invalid input before submitting a form. This helps users avoid wasting time

on errors.

By applying these principles, you can create websites and applications that are intuitive and user-friendly. Remember, the goal is to "don't make me think" – let users accomplish their tasks seamlessly and efficiently.
