### 2014 Specimen Paper 2 Geography IGCSE

The International General Certificate of Secondary Education (IGCSE) in Geography is designed to provide students with a broad understanding of the world around them, including the physical environment, human societies, and the interactions between them. Paper 2 of the exam tests students' knowledge of these topics through a variety of question types.

#### Question 1: Natural Hazards

- Describe the main causes and effects of earthquakes.

**Answer:** Earthquakes are caused by the sudden release of energy along geological faults. The effects of earthquakes can include ground shaking, liquefaction, tsunamis, and landslides.

#### Question 2: Landforms

- Explain how rivers form meanders.

**Answer:** Meanders form when a river erodes the banks of its channel, creating a sinuous or curved course. This erosion occurs where the river current is fastest, typically on the outside of the bend. As the river continues to erode, the meander increases in size.

#### Question 3: Weather and Climate

- Describe the processes involved in the formation of a tropical storm.

**Answer:** Tropical storms form over warm ocean waters. When warm, moist air rises, it releases heat and moisture into the atmosphere. This causes the air to cool and condense, forming clouds. If the clouds become sufficiently thick, they begin to rotate and organized into a storm system.

#### **Question 4: Urban Environments**

- **Explain the challenges faced by rural-to-urban migrants in developing countries.**

**Answer:** Rural-to-urban migrants in developing countries often face challenges such as unemployment, poverty, inadequate housing, lack of access to healthcare and education, and discrimination.

#### **Question 5: Geographical Skills**

- **Complete a line graph showing the population of a city from 1950 to 2010.**

**Answer:** The answer to this question would require plotting the given population data on a line graph, showing the population growth or decline over time.
