Would a customer with arthritis require medical clearance? If you suffer from arthritis, you do not need medical clearance to fly. However, if your mobility is severely impaired, a medical report and MEDIF is required.

Time for Andrew: A Ghost Story by Mary Downing Hahn

Introduction

"Time for Andrew" is a gripping ghost story written by Mary Downing Hahn, published in 1992. The book follows the chilling tale of a young girl named Julia who uncovers a haunting secret in an old mansion.

Question 1: What is the story about?

Julia moves into a crumbling mansion with her family, but she soon realizes that she is not alone. She starts hearing strange noises, experiencing paranormal activities, and witnessing the ghostly presence of a young boy named Andrew who died in the house many years ago.

Question 2: Who is Andrew?

Andrew is a 10-year-old boy who drowned in a well on the mansion grounds in 1910. His spirit remains trapped in the house, unable to move on. He befriends Julia and shows her the true horrors that took place in the past.

Question 3: What is the significance of the well?

The well plays a pivotal role in the story as it is the site of Andrew's drowning and the focal point of the paranormal activity. Julia discovers that a terrible tragedy occurred at the well, which set off a chain of events leading to Andrew's untimely demise.

Question 4: How does Julia help Andrew?

Julia's empathy and determination to uncover the truth lead her on a quest to solve Andrew's mystery. She pieces together the fragments of the past, discovers the identity of Andrew's killer, and ultimately confronts the evil that has haunted the house for over a century.

Question 5: What is the resolution of the story?

In a heart-wrenching climax, Julia confronts the killer and exposes the shocking truth behind Andrew's death. Her actions break the cycle of violence and allow Andrew's spirit to finally find peace. The story concludes with a bittersweet farewell as Julia and Andrew's spirit say goodbye, knowing that justice has been served and the past can finally be laid to rest.

Suck it Up #1: Embracing Adversity with Brian Meehl

In the realm of personal development, one common phrase is, "Suck it up." But what does this really mean, and how can it help us navigate life's challenges? In this article, we delve into the concept of "sucking it up" and explore its benefits, guided by the insights of Brian Meehl, a renowned speaker and author on the topic.

What Does "Suck it Up" Mean?

To "suck it up" is to endure discomfort, adversity, or pain without complaining or seeking pity. It involves developing a mindset of resilience and accepting that difficult experiences are an inevitable part of life. When we suck it up, we choose to focus on the positive aspects of our situation and find ways to grow from the experience.

Why Should We "Suck it Up"?

According to Brian Meehl, "Sucking it up" offers several benefits. It helps us:

- **Build resilience:** By facing challenges head-on, we develop a sense of competence and confidence that enables us to handle future obstacles.
- **Develop mental toughness:** When we learn to endure discomfort, we become more resistant to stress and setbacks, creating a stronger

foundation for success.

- **Foster growth:** Difficult experiences often provide us with valuable lessons and insights that we would not have gained otherwise.

How Can We "Suck it Up"?

Meehl suggests several strategies for cultivating the ability to "suck it up":

- **Practice self-discipline:** Start with small challenges and gradually increase the difficulty, teaching yourself to persist even when it's uncomfortable.
- **Focus on gratitude:** Reflect on the positive aspects of your life, even amidst adversity. This helps shift your perspective and reduces stress.
- **Seek support:** Surround yourself with people who believe in you and offer encouragement when you need it most.

Conclusion

"Sucking it up" is not about giving up or wallowing in self-pity. It's about embracing adversity with courage and determination, recognizing that it can pave the path to resilience, growth, and a more fulfilling life. As Brian Meehl wisely advises, "When life knocks you down, suck it up, get back up, and come out stronger than ever before."

What is the prevalence of pediculosis? Approximately 6–12 million people are infected by this insect in different areas of the world annually (6). The prevalence of head lice infestation is variable between less than 5% to over 40% among school children, respectively (7).

What is a risk factor for pediculosis? Head-to-head (or hair-to-hair) contact is the easiest way for lice to spread. The biggest risk groups are children in preschool, daycare, and school, and their families. While it's most common in young children, lice can spread to people of any age.

Who is most likely to get pediculosis? Preschool and elementary-age children, 3 to 11 years of age are infested most often. Females are infested more often than males, probably due to more frequent head to head contact. Body lice are also cosmopolitan but are less common and usually seen in settings of poverty, war, and

homelessness.

What are the risk factors for pediculosis pubis?

What is pediculosis caused by? Pediculosis corporis is a skin condition caused by body lice (*Pediculus humanus corporis*) that feed on human blood. Body lice are parasitic insects that feed on human blood.

Where is lice prevalent? Lice are most common among school-age children who are more likely to have close contact with each other or share combs, brushes, hats and other objects that touch the hair.

Who is most at risk for lice? Risk factors So the risk of spreading head lice is greatest among children who play or go to school together. In the United States, cases of head lice most often occur in children in preschool through elementary school.

How is pediculosis spread between individuals? How is pediculosis spread? For both head lice and body lice, transmission can occur during direct contact with an infested individual. Sharing of clothing and combs or brushes may also result in transmission of these insects. While other means are possible, crab lice are most often transmitted through sexual contact.

What is the occurrence of pediculosis? Pediculosis (louse infestation) affects hundreds of millions of people worldwide each year and has been reported in all countries and within all socioeconomic classes. Lice are obligate, parasitic insects that have no free-living stage in their life cycle.

Who is most susceptible to lice? Who is at risk? In the United States, infestation with head lice is most common among preschool- and elementary school-age children and their household members and caretakers.

What is pediculosis an infestation with? The head louse (*Pediculus humanus capitis*) is one of three types of lice that can infest people. These insects are about the size of a sesame seed and live in human hair where they feed on tiny amounts of human blood. Head lice are hard to see because they are very small, avoid light, and move fast.

What hair type is more susceptible to lice? Head lice do not prefer any particular type of hair. Anyone can get them. However, the study in Jordan suggests that people with longer hair may get lice more frequently. African Americans may have less risk of having head lice due to the shape and size of their hair shafts.

Who is most likely to get pubic lice? They are most often spread through sexual contact. Pubic lice affect men and women at all levels of society all over the world. Teens and people in their 20s are most often affected.

What is the incidence of pediculosis? The prevalence of pediculosis capitis is usually higher in girls and women and varies from 0.7-59% in Turkey, 0.48-22.4% in Europe, 37.4% in England, 13% in Australia, up to 58.9% in Africa, and 3.6-61.4% in the Americas.

How to prevent pediculosis? Teach children not to share clothing and supplies, such as hats, scarves, helmets, sports uniforms, towels, combs, brushes, bandanas, hair ties, and headphones. Disinfect combs and brushes used by a person with head lice by soaking them in hot water (at least 130°F) for 5 to 10 minutes.

What is the occurrence of pediculosis? Pediculosis (louse infestation) affects hundreds of millions of people worldwide each year and has been reported in all countries and within all socioeconomic classes. Lice are obligate, parasitic insects that have no free-living stage in their life cycle.

What is the prevalence of public lice? About 3 million people in the U.S. get pubic lice every year.

What is the prevalence of body lice? We recorded a high prevalence of pruritus (548 persons [26.9%]), associated with scratch lesions in 306 (17.4%) persons. Overall, 382 (23.3%) participants had lice. The prevalence of differing types of lice was body lice, 12.2% (n = 242); head lice, 4.5% (n = 87); crab lice, 3.2% (n = 53); and scabies, 2.8% (n = 50).

What percent of the population has lice? According to a 2022 review of studies , global estimates suggest about 19% of school-aged children have head lice. Head lice are found in every country and across cultures and socioeconomic classes. In short, lice are nothing to feel embarrassed about.
