You can also type "math solver" to give the experience a try on desktop and coming soon, on mobile.

**Is there always a right answer in math?** No. That statement would be true of arithmetic and certain problems in higher math, but once you hit non-linear algebra answers can also be described as complete or incomplete. After this point an answer can be correct but incomplete.

---

**How do I pass my math test?**

**How to check if your algebra answer is correct?** Substitute the number for the variable in the equation. Simplify the expressions on both sides of the equation. Determine whether the resulting equation is true. If it is true, the number is a solution.

**How to double check algebra?** Plug the solution back into the equation. This is the simplest way to check that your answer is correct. If you solved for a variable or multiple variables, plug these solutions back into the equation and work backwards to see if they make the equation true.

**What is the solution for the equation  $5/(3b^3 - 2b^2 - 5) = 2/(b^3 - 2)$ ?** Summary: The solution to the equation  $5/(3b^3 - 2b^2 - 5) = 2/(b^3 - 2)$  are  $b = 0$  and  $b = 4$ .

**What is the app that checks math answers?**

**How do you check your answer?**

**How to verify using algebra?**

**How to answer algebra?**

**What is PEMDAS in math?** PEMDAS is an acronym used to mention the order of operations to be followed while solving expressions having multiple operations. PEMDAS stands for P- Parentheses, E- Exponents, M- Multiplication, D- Division, A- Addition, and S- Subtraction.

**What are the 3 solutions in math?** A system of linear equations can have three equations that will have three variables in each linear equation; for example,  $x$ ,  $y$ , and  $z$ . A system of equations can have three types of solutions: one solution, infinite solutions, or no solution.
