Unit 1: Equations, Inequalities, and Functions

This unit focuses on the fundamental concepts of algebra, including equations, inequalities, and functions. Students will learn to solve equations and inequalities, graph functions, and apply these concepts to real-world situations.

Q1: What is an equation? A: An equation is a statement that two expressions are equal. It has the form $a = b$, where a and b are algebraic expressions.

Q2: How do you solve an equation? A: To solve an equation, you perform a series of operations to isolate the variable on one side of the equation. For example, to solve the equation $x + 3 = 7$, you subtract 3 from both sides: $x + 3 - 3 = 7 - 3$, which gives $x = 4$.

Q3: What is an inequality? A: An inequality is a statement that two expressions are not equal. It has the form $a \neq b$, $a > b$, $a < b$, $a \geq b$, or $a \leq b$.

Q4: How do you solve an inequality? A: To solve an inequality, you isolate the variable on one side of the inequality. You also need to pay attention to the inequality symbol and make sure it is not reversed when you perform operations.

Q5: What is a function? A: A function is a relation that assigns to each element of a set a unique element of another set. In other words, a function is a rule that takes an input value and produces an output value.
