## **SharePoint Solution Architect Interview Questions and Answers**

### **Introduction**

SharePoint solution architects play a crucial role in designing, deploying, and maintaining SharePoint solutions. Interviews for these positions often involve technical questions that assess the candidate's expertise and understanding of the platform. Here are five common SharePoint solution architect interview questions and their corresponding answers:

#### **Question 1: Describe the SharePoint farm architecture and its components.**

##### **Answer:**

A SharePoint farm is a group of connected SharePoint servers that work together to provide a scalable and fault-tolerant environment. The components of a SharePoint farm include web servers, application servers, database servers, and a central administration server. Each component has a specific role and can be scaled to meet the needs of the organization.

#### **Question 2: Explain the difference between SharePoint on-premises and SharePoint Online.**

##### **Answer:**

SharePoint on-premises is a version of SharePoint that is installed and managed on the organization's own servers. SharePoint Online is a cloud-based service hosted by Microsoft. The key difference between the two is that with SharePoint on-premises, the organization has full control over the environment, while with SharePoint Online, Microsoft manages the infrastructure.

**Question 3: What are the best practices for SharePoint security and governance?**

**Answer:**

SharePoint security and governance involve implementing measures to protect the platform from unauthorized access, data breaches, and malicious activities. Best practices include:

- Implementing strong authentication and authorization mechanisms.
- Enforcing access control policies and permissions.
- Regularly reviewing and updating security settings.
- Establishing governance policies for data management and content publishing.

**Question 4: Explain the concept of SharePoint site collections and subsites.**

**Answer:**

A SharePoint site collection is a top-level hierarchy that contains a group of SharePoint sites. Sites within a site collection share the same administration and permissions, while subsites can be created to organize content within a site collection. Subsites inherit the permissions and settings of the parent site but can have their own unique configurations.

**Question 5: What are the key considerations when designing a SharePoint intranet portal?**

**Answer:**

Designing a SharePoint intranet portal requires considering factors such as:

---

- Target audience and their needs.
- Content organization and navigation structure.
- Customization and branding to reflect the organization's identity.
- Performance optimization and scalability.
- Security and governance requirements.

## **Static Electricity: A Charge to Remember**

**Question 1:** What is static electricity?

**Answer:** Static electricity is the accumulation of electrical charge on an object. It occurs when electrons are transferred from one object to another, resulting in an imbalance in electrical charges.

**Question 2:** What causes static electricity?

**Answer:** Static electricity can be generated by various means, such as friction, induction, and contact. Friction, the rubbing of two materials, transfers electrons from one object to the other. Induction occurs when a charged object is brought near a neutral object, causing the rearrangement of charges in the neutral object. Contact simply involves the transfer of electrons between two objects when they come into physical contact.

**Question 3:** What are the effects of static electricity?

**Answer:** Static electricity can have both positive and negative effects. It can cause shocks, spark formation, and the attraction or repulsion of charged objects. On the positive side, static electricity is used in applications such as electrostatic spray painting, where it helps attract paint particles to the desired surface.

**Question 4:** How can static electricity be controlled?

**Answer:** Controlling static electricity involves minimizing its generation and discharge. Anti-static materials, such as coatings or fabrics, can reduce friction and electron transfer. Grounding, connecting objects to the earth, allows charges to dissipate safely. Ionizers, which generate positive and negative ions, neutralize charges in the air.

**Question 5:** What are some safety precautions regarding static electricity?

**Answer:** It is crucial to be aware of potential hazards related to static electricity. Avoid contact with charged objects, as it can lead to shocks. In hazardous environments, such as fuel handling facilities, grounding and anti-static measures are essential to prevent the buildup of static charges and potential explosions.

### **Soal Ulangan IPA Kelas 6 SD Semester 2 dan Kunci Jawaban**

#### **Paragraf 1**

##### **Pertanyaan:**

1. Jelaskan pengertian fotosintesis dan prosesnya secara singkat.
2. Sebutkan faktor-faktor yang mempengaruhi fotosintesis.

##### **Jawaban:**

1. Fotosintesis adalah proses pembuatan makanan oleh tumbuhan yang memanfaatkan sinar matahari, karbon dioksida, dan air. Prosesnya meliputi reaksi terang dan reaksi gelap.
2. Faktor yang mempengaruhi fotosintesis: intensitas cahaya, ketersediaan karbon dioksida, suhu, dan air.

#### **Paragraf 2**

##### **Pertanyaan:**

1. Jelaskan perbedaan antara ekosistem alami dan ekosistem buatan.
2. Berikan contoh masing-masing ekosistem.

##### **Jawaban:**

1. Ekosistem alami adalah ekosistem yang terbentuk secara alami tanpa campur tangan manusia, sedangkan ekosistem buatan adalah ekosistem yang dibuat oleh manusia.
2. Contoh ekosistem alami: hutan, laut, padang rumput. Contoh ekosistem buatan: sawah, kebun, kolam ikan.

### **Paragraf 3**

#### **Pertanyaan:**

1. Jelaskan prinsip kerja pesawat sederhana tuas.
2. Sebutkan jenis-jenis tuas.

#### **Jawaban:**

1. Tuas adalah pesawat sederhana yang terdiri dari batang kaku yang dapat berputar pada titik tetap (fulkrum). Prinsip kerja tuas berdasarkan keseimbangan momen gaya di kedua sisi fulkrum.
2. Jenis tuas: tuas jenis pertama (fulkrum di antara beban dan kuasa), tuas jenis kedua (beban di antara fulkrum dan kuasa), dan tuas jenis ketiga (kuasa di antara fulkrum dan beban).

### **Paragraf 4**

#### **Pertanyaan:**

1. Jelaskan perbedaan antara energi gerak dan energi potensial.
2. Berikan contoh masing-masing bentuk energi.

#### **Jawaban:**

1. Energi gerak adalah energi yang dimiliki oleh benda yang bergerak, sedangkan energi potensial adalah energi yang dimiliki oleh benda karena posisinya atau keadaannya.
2. Contoh energi gerak: sepeda yang melaju, bola yang dilempar. Contoh energi potensial: benda yang berada di ketinggian, pegas yang ditarik.

### **Paragraf 5**

#### **Pertanyaan:**

1. Jelaskan proses terjadinya hujan pembentukan awan hingga turunnya air hujan.
2. Sebutkan jenis-jenis awan berdasarkan bentuknya.

## Jawaban:

1. Proses terjadinya hujan: penguapan air laut atau danau ? pembentukan awan ? awan semakin besar dan berat ? titik-titik air bergabung dan jatuh sebagai hujan.
2. Jenis awan berdasarkan bentuknya: awan cumulus (bulat), awan stratus (lapisan), awan cirrus (bulu).
