## Year 3 Maths Overview: Autumn Term 1: Reasoning Fluency

### Reasoning Fluency: What is it?

Reasoning fluency refers to the ability to apply logical reasoning skills to solve mathematical problems efficiently. It involves making connections, finding patterns, and decomposing problems to find solutions.

### **Key Questions to Focus On:**

- Can students explain their reasoning behind mathematical calculations?
- Can they identify and use different strategies to solve problems?
- Can they effectively analyze and interpret mathematical information?

### **Overview of Activities:**

- **Number and Place Value:** Reasoning activities will focus on comparing and ordering numbers, rounding to the nearest 10 or 100, and finding missing values in number sequences.
- **Addition and Subtraction:** Students will develop fluency in solving addition and subtraction problems up to 1000, including finding unknown values in equations and using number bonds to decompose numbers.
- **Multiplication and Division:** The focus will be on understanding multiplication as repeated addition and division as sharing. Students will practice solving simple multiplication and division problems within the 12 times table.
- **Fractions and Decimals:** Reasoning activities will involve understanding fractions as parts of a whole and recognizing their equivalence. Students will also explore decimals up to two decimal places.
- **Measurement:** The emphasis will be on developing an understanding of length, mass, and capacity, including measuring, comparing, and estimating measurements.

### **Assessment:**

Assessment will be ongoing throughout the term through observation, questioning, and written work. The aim is to identify areas where students demonstrate reasoning fluency and areas where further support is needed.

## Example Questions and Answers:

1. **Question:** Explain how you could solve  $345 + 278$  without a calculator.  
**Answer:** I could break 345 into  $300 + 40 + 5$ , and then add the three parts to 278:  $300 + 200 = 500$ ,  $40 + 70 = 110$ , and  $5 + 8 = 13$ .  $500 + 110 + 13 = 623$ .
2. **Question:** A bag of marbles has 15 red marbles, 12 blue marbles, and 8 yellow marbles. What percentage of the marbles are blue? **Answer:** The total number of marbles is  $15 + 12 + 8 = 35$ . The percentage of blue marbles is  $(12/35) \times 100 = 34.29\%$  (rounded to the nearest percent).
