What is Audi code P0122? A P0122 code is the generic OBD-II code defined as "Throttle Pedal Position Sensor/Switch (TPS) A Circuit Low Input." This code relates to the vehicle's Engine Control Module (ECM) and TPS Sensor Circuit A output voltage and is triggered when the voltage falls below the sensor's anticipated range.

What happens when a solenoid valve goes bad? In conclusion, when a solenoid valve goes bad, it can cause a variety of issues including malfunctioning systems, leaks, and unusual sounds or vibrations. If you suspect that a solenoid valve in one of your systems is failing, it's important to address the issue promptly to prevent more serious problems from occurring.

What are the symptoms of a bad solenoid in a car? The four signs of a bad starter solenoid include an engine that won't start; the absence of a clicking noise when cranking the engine; a spinning starter without an engaged flywheel; and a slow-cranking engine.

This discrepancy often involves the number of pulses that are detected during a certain number of engine revolutions.

What is Audi error P0333? Diagnostic trouble code (DTC) P0333 stands for “Knock Sensor 2 Circuit High Input (Bank 2).” Again, abnormal combustion results in a rapid pressure increase inside the cylinders, which creates a vibration in the engine block.

What does Audi sensor mean? Audi pre sense systems work by using cameras and radar sensors to keep track of dangers around the vehicle.
