Thermodynamics and Introduction to Thermostatistics Solution Manual

Thermodynamics and Introduction to Thermostatistics is a textbook written by Nandini Chatterjee and Amit Goswami. The book provides a comprehensive introduction to the subject of thermodynamics and introduces students to the basics of statistical mechanics. The solution manual provides worked-out solutions to all the problems in the textbook.

Question 1:

Explain the first law of thermodynamics.

Answer:

The first law of thermodynamics states that energy cannot be created or destroyed, but only transferred or transformed. In other words, the total energy of an isolated system remains constant.

Question 2:

What is entropy?

Answer:

Entropy is a measure of the disorder or randomness of a system. The more disordered a system is, the higher its entropy.

Question 3:

What is the Boltzmann distribution?

Answer:

The Boltzmann distribution is a probability distribution that gives the likelihood of finding a system in a particular microstate. The Boltzmann distribution is given by:

$$P(E) = \exp(-E/kT)$$

where:

- $P(E)$ is the probability of finding the system in an energy state E
- k is the Boltzmann constant
- T is the temperature

Question 4:

What is the Gibbs free energy?

Answer:

The Gibbs free energy is a thermodynamic potential that is used to determine the spontaneity of a reaction. The Gibbs free energy is given by:

$$G = H - TS$$

where:

- G is the Gibbs free energy
- H is the enthalpy
- T is the temperature
- S is the entropy

Question 5:

What is the Carnot cycle?

Answer:

The Carnot cycle is a hypothetical heat engine that operates between two reservoirs at different temperatures. The Carnot cycle is the most efficient possible heat engine and is used as a benchmark for comparing the efficiency of real heat engines.
