**What is Schleiermacher's preferred translation strategy?** For Schleiermacher there are two ways available for the true translator: Either the translator leaves the writer alone as much as possible and moves the reader toward the writer, or he [sic] leaves the reader alone as much as possible and moves the writer toward the reader.

**Who is the father of translation theory?** Because religion played a huge part in the development of translation, the early church named Jerome as the translation patron saint. In the fourth century AD, Saint Jerome translated the Bible to Latin, and the Latin Bible became predominantly used in the Roman Catholic church.

**What is translation theory in translation studies?** The theory of translation is a complex and multidisciplinary field that sits at the intersection of science and art. At its core, linguistic theory of translation is the process of conveying the essence and intent of a source text from one language to another, bridging the gap between different languages and cultures.

**Who was the early theorist in translation studies?** James Holmes (1924 – 1986) was an American translation theorist of the early phase and he himself was a poet and translator. Dismissing the concept of equivalence he maintained that the referent of the translated work was not the same as that of the SL text but a linguistic formulation.

**What was the philosophy of Schleiermacher?** Schleiermacher saw the ego, the person, as an individualization of universal reason; and the primary act of self-consciousness as the first conjunction of universal and individual life, the immediate union or marriage of the universe with incarnated reason.

**What are two levels of interpretation in the hermeneutics of Schleiermacher?** Schleiermacher's hermeneutic consists of a dual aspect: grammatical interpretation and psychological interpretation.

**What are the famous translation theories?** The six main translation theories are: sociological, communicational, hermeneutic, linguistic, literary and semiotic. Let's focus on theory!

**Who is the father of modern translation?** Eugene Nida (1914–2011) is widely regarded today as the founder of modern Bible translating, but he also made important contributions to theories of translation in general as well as language pedagogy.

**What is the theory of translation by Peter Newmark?** Newmark holds that different texts require different translation criteria and methods. He proposes that semantic translation is used for expressive texts and communicative for informative and vocative texts. In translating expressive texts, the expressive components should be rendered closely.

**What is the main concern of translation theory?** 1- Translation theory's main concern is to determine appropriate translation methods for the widest possible range of texts or text- categories. Further , it provides a framework of principles, restricted rules and hints for translating texts and criticizing translations, a background for problem -solving.

**What are the principles of translation theory?** Principles of Translation: 1. Accuracy: The translation should convey the meaning of the source text accurately. 2. Fluency: The translated text should sound natural and idiomatic in the target language.

**What is the main object of translation theory?** The aim of theoretical translation studies is to elaborate principles that explain and predict the linguistic, cognitive, cultural, and ideological phenomena inherent in the process of transferring a written, oral, or multimodal text from the source language to the target language in a specific sociocultural context.

**Who is the father of translation studies?** The term "translation studies" was coined by the Amsterdam-based American scholar James S. Holmes in his 1972 paper "The name and nature of translation studies", which is considered a foundational statement for the discipline.

**Who is the founder of translation?** The Babylonians were the first to establish translation as a profession. The first translations of Greek and Coptic texts into Arabic, possibly indirectly from Syriac translations, seem to have been undertaken

as early as the late seventh century CE.

**Who first introduced the theory of translation shifts?** Translation shift according to Catford (1965) is the departures from formal correspondence in the process of going from the source language (SL) to the target language (TL). Catford divided translation shift into two major types, they are level and category shifts.

**Was Schleiermacher a Calvinist?** Friedrich Schleiermacher stood consciously in the tradition of John Calvin, both institutionally and theologically. He preached as a Reformed minister, and he did his theology with the intention of describing the religious consciousness of a branch of the Reformed Church.

**What does Schleiermacher say about religious experience?** Schleiermacher is quite clear about the fact that participation in religious community provides the basic set of terms in which Christians understand the experience of redemption; he credits such participation not only with transmitting the influence of Jesus which effects the removal of Unseligkeit, but also with ...

**What is the Christology of Schleiermacher?** According to Schleiermacher's second Christological theorem, "In the uniting of the divine nature with the human, the divine alone was active or self-imparting, and the human alone passive or in process of being assumed; but during the state of union every activity was a common activity of both natures" (CF, §97).

**What is the theological method of Schleiermacher?** What Friedrich Schleiermacher is most known for is his theological method of deriving doctrine from religious experience. He believed that religious piety is to be found in the "feeling of absolute dependence", and all subsequent doctrines must be discovered through reflection upon religious experience.

**Did Schleiermacher believe in the Trinity?** Schleiermacher has been severely criticized for his doctrine of the Trinity, perhaps more than for any other element of his theology.

**What are the two methods of translation according to Schleiermacher?** Schleiermacher in fact finds only two methods of effecting the target- language reader's understanding of the source-language "author": "Either the translator leaves

the author in peace, as much as possible, and moves the reader towards him; or he leaves the reader in peace, as much as possible, and moves the author ...

**Who is the founder of translation?** The Babylonians were the first to establish translation as a profession. The first translations of Greek and Coptic texts into Arabic, possibly indirectly from Syriac translations, seem to have been undertaken as early as the late seventh century CE.

**What is the general theory of translation?** The general theory of translation is an interdisciplinary area, predominantly linguistic, but also closely allied to philology, sociology, ethnography and etc. It is based on the application of linguistics theory to a specific type of speech behavior, i.e. translating.

**Who first introduced the theory of translation shifts?** Translation shift according to Catford (1965) is the departures from formal correspondence in the process of going from the source language (SL) to the target language (TL). Catford divided translation shift into two major types, they are level and category shifts.

**What is translation according to Chomsky?** According to Chomsky, the possibility to translate is unlimited as far as "closed" texts are concerned - texts that can be interpreted in a single way, without connotations, i.e. a minimal part of real texts.
