**What is the minimum grade for a gravity sewer line?** If you've ever wondered what is the minimum slope for water drainage, it is generally accepted that 1/4" per foot of pipe run is the minimum for proper pitch on a sewer line. Larger lines such as 8" pipe actually require less pitch due to the larger circumference of the pipe.

**What is the slope of gravity sanitary sewer?** All service laterals shall be less than 100 feet in length. Longer laterals may be accepted on a case-by-case basis. Service laterals shall have a minimum slope of 1/8" inch per foot (1.04 percent).

**What is the minimum acceptable velocity in a gravity sewer line?** The pipe diameter and slope shall be selected to obtain the greatest practical velocities to minimize settling problems. Designs must include a minimum scouring velocity of 2 feet per second.

**What is the minimum grade for 4 sewer pipe?**

**How deep are gravity sewers?** Pipes are generally eight inches or larger and are typically installed at a minimum depth of three feet and a maximum depth of 25 feet. Manholes are located no more than 400 feet apart or at changes of direction or slope.

**What is the difference between a gravity sewer and a pressure sewer?** Pressure sewers differ from conventional gravity collection systems because they break down large solids in the pumping station before they are transported through the collection

system. Their watertight design and the absence of manholes eliminates extraneous flows into the system.

**What is the normal slope required for sewerage line?** Typical slopes in sewers vary from 1 per 1000 to 10 per 1000, with larger diameter sewers having less slope. Remember to put the least slope possible, while ensuring that the minimum velocity criterion is satisfied, such that sewers do not go too far underground. Design of branch sewers is not required.

**What is the minimum slope used of a drain that is gravity flow?** Using a minimum slope of 2% will encourage a good flow when directing water to a rain garden. For a 2% slope your pipe height will lower  $\sim \frac{1}{4}$  inch for every foot of length. You can also approximate this by multiplying the pipe length in inches by .02.

**What is the minimum slope on a sewer line?** The standard slope is anywhere from  $\frac{1}{4}$  inch to 3 inches per foot depending on the use. An accurate calculation is essential for properly functioning plumbing. A pipe that doesn't slope enough won't drain while a pipe that slopes too much drains water too quickly, leaving solids behind.

**What is the minimum sewer gradient?** The maximum fall for a waste pipe is 1 in 40. The minimum fall is 1 in 110 (apart from vertical pipes, but that's a different story). So pipes with a gradient between 1 in 40 and 1 in 110 should have adequate flow to prevent blockages from occurring.

**What is the minimum drainage grade?** For efficient drainage, paved surfaces should have a minimum 1-percent slope. Turf or landscaped areas should have a minimum slope of 2 percent. French Drains: French drains are typically used to draw excess groundwater and surface water away from an area of concern.

**Apakah kubis baik untuk kompos?** Ya, Anda bisa membuat kubis menjadi kompos . Meskipun cukup keras dibandingkan dengan sayuran tipis seperti bayam, daun kubis masih cepat membusuk di tumpukan kompos – meskipun yang terbaik adalah memecah atau memotong seluruh kepala kubis untuk mempercepat proses pengomposan dalam bentuk padat.

**Zat apa saja yang terkandung dalam kompos?** Hasil Penelitian Nurhayati ( 2010 ) menginformasikan bahwa hasil analisis sampah pasar yang dikomposkan selama 45 hari memiliki kandungan N 1.17 %, C- organik 11.46 %, P 0.22 %, dan K 1.05 %. Kompos yang baik mengandung unsur hara makro  $N > 1.5 \%$ ,  $P_2O_5 > 1\%$ , dan  $K_2O > 1.5 \%$ , C/N ratio antara 15 – 20 .

**Apakah sisa sayuran bisa dijadikan pupuk kompos?** Sampah yang bisa digunakan dan di daur ulang menjadi pupuk kompos adalah sampah yang organik. Anda bisa mendapatkannya dari sisa sayur segar yang tidak dimasak. Ketika Anda memasak sayur tentu ada bagian sayur yang tidak Anda masak misalnya saja adalah pada batang akar sayuran dan daun sayuran yang sudah tua.

**Pupuk kompos mengandung apa?** Kandungan nutrisi dalam kompos seperti nitrogen, fosfor, dan kalium dapat mempercepat pertumbuhan tanaman. Tanaman yang mendapatkan nutrisi yang cukup cenderung tumbuh lebih cepat dan lebih sehat.

**Apakah kubis bisa dijadikan pupuk?** Penggunaan kubis busuk sebagai pupuk dapat berdampak positif terhadap kesehatan tanah dan hasil panen.

**Sayuran apa yang tidak boleh dijadikan kompos?** Bawang Merah dan Bawang Putih: Ini dapat mengusir cacing tanah, komponen penting dari kompos yang sehat. Tanaman yang Sakit : Jika buah atau sayuran Anda menunjukkan tanda-tanda penyakit, jangan dijadikan kompos. Mereka mungkin menyebarkan penyakit kembali ke kebun Anda.

**Berapa rasio kompos terbaik?** Untuk menyediakan dua elemen penting ini dalam jumlah optimal, Anda dapat menggunakan rasio karbon terhadap nitrogen (C/N) untuk setiap bahan kompos Anda. Rasio C/N yang ideal untuk pengomposan umumnya dianggap sekitar 30:1 , atau 30 bagian karbon untuk setiap bagian nitrogen menurut beratnya.

**Apakah kompos mengandung nitrogen tinggi?** Dalam kebanyakan kasus, kompos jadi diklasifikasikan sebagai kondisioner tanah daripada pupuk karena kadar nitrogen, kalium, dan fosfor yang relatif rendah . Kompos yang sudah jadi menambahkan unsur-unsur ini, dan unsur-unsur lainnya, tetapi melepaskannya

GRAVITY SANITARY SEWER DESIGN AND CONSTRUCTION ASCE MANUAL AND REPORTS

dalam jangka waktu yang lebih lama dibandingkan pupuk kimia.

**Bagaimana ciri ciri kompos yang sudah jadi dan baik?** Ciri-ciri kompos sudah jadi dan baik adalah: Warna kompos coklat kehitaman. Aroma kompos yang baik tidak menyengat, tetapi mengeluarkan aroma seperti bau tanah atau bau humus hutan.

**Apa yang harus dihindari dalam pembuatan pupuk kompos?**

**Apakah mentimun baik untuk kompos?** Ya, Anda bisa membuat kompos mentimun . Karena kandungan airnya tinggi, timun akan membuat kompos dengan sangat cepat – mentimun tidak akan menambah jumlah besar ke tumpukan kompos Anda, namun kelembapan tersebut akan membantu bahan-bahan lain menjadi kompos lebih cepat sehingga semuanya baik-baik saja.

**Bagaimana cara mencegah agar pupuk kompos tidak berbau busuk?** Aerasi atau sirkulasi udara sangat penting dalam proses pengomposan. Sirkulasi udara yang baik akan membantu mempercepat proses penguraian bahan organik dan mengurangi bau menyengat. Untuk memastikan aerasi yang baik, Anda dapat membolak-balik kompos secara rutin atau membuat lubang aerasi pada tumpukan kompos.

**Zat apa saja yang terkandung dalam pupuk kompos?** Beberapa unsur hara makro yang terkandung dalam kompos antara lain nitrogen, fosfor, potasium, magnesium, dan unsur penting lainnya. Sedangkan kandungan unsur hara mikro yang ada di kompos seperti besi, sulfur, mangan, tembaga, seng, boron, dan molibdenum.

**Apa manfaat penambahan gula dalam pembuatan kompos?** Untuk fungsi penambahan larutan gula dalam pembuatan pupuk ini adalah sebagai makanan untuk perkembangan mikroorganisme seperti yang dinyatakan oleh Witono (2016) dalam Ali et al., (2018) bahwa fungsi dari larutan gula adalah sebagai sumber energi bagi perkembangbiakan mikroorganisme yang diaktifkan selama proses ...

**Apa saja kekurangan dari pupuk kompos?** Pupuk Kompos Sedangkan kelemahannya adalah: Jumlah pupuk yang diberikan lebih tinggi daripada pupuk anorganik; Respon tanaman lebih lambat; Menjadi sumber hama dan penyakit bagi

GRAVITY SANITARY SEWER DESIGN AND CONSTRUCTION ASCE MANUAL AND REPORTS

tanaman.

**Berapa lama waktu yang dibutuhkan kubis untuk menjadi kompos?**

Pengomposan secara alami memerlukan waktu yang relatif lama yaitu sekitar 2-3 bulan bahkan 6-12 bulan . Pengomposan dapat berlangsung lebih cepat dengan cara fermentasi menggunakan bantuan mikroorganisme (Subandriyo, 2012).

**Pupuk kubis apa yang terbaik?** Saat menanam benih di dalam ruangan, mulailah memupuk tanaman kubis setelah mereka memiliki dua hingga empat daun asli. Larutan encer dari pupuk cair seimbang (10-10-10), teh kompos lemah, atau emulsi ikan direkomendasikan. Hal ini dapat diulang setiap dua minggu.

**Bagaimana cara membuat kompos dari kubis?** Mempersiapkan Limbah Kubis untuk Pengomposan Mulailah dengan memotong atau menyuwir daun, batang, dan akar kubis menjadi potongan-potongan kecil . Hal ini meningkatkan luas permukaan bahan, memungkinkan mikroorganisme menguraikannya lebih cepat.

**Apa yang tidak boleh ditambahkan ke tumpukan kompos?** JANGAN menambahkan sisa daging, tulang, minyak, telur utuh, atau produk susu ke dalam tumpukan kompos karena akan terurai perlahan, menimbulkan bau, dan dapat menarik perhatian hewan pengerat. JANGAN menambahkan kotoran hewan peliharaan atau sisa liter kucing ke tumpukan kompos. JANGAN menambahkan bahan tanaman yang sakit atau gulma yang sudah berbiji.

**Daun apa yang tidak boleh Anda gunakan dalam kompos?** Daun yang buruk untuk kompos: Daun yang buruk adalah daun yang lebih tinggi ligninnya dan lebih rendah nitrogen dan kalsiumnya. Ini termasuk pohon beech, daun oak, holly, dan kastanye manis. Selain itu, pastikan untuk menghindari penggunaan daun kenari hitam dan kayu putih karena tanaman ini mengandung herbisida alami yang akan mencegah benih berkecambah.

**Mengapa bawang bombay tidak boleh dimasukkan ke dalam kompos?** Namun pengomposan bawang merah dapat menyebabkan beberapa masalah, yang harus Anda waspadai. Alasan sebagian orang menghindari menambahkan bawang bombay ke dalam tumpukan kompos adalah karena bawang bombay memiliki bau yang sangat menyengat dan mengeluarkan gas asam saat dicincang . Beberapa orang percaya bahwa keasaman ini dapat mempengaruhi mikroorganisme dalam

GRAVITY SANITARY SEWER DESIGN AND CONSTRUCTION ASCE MANUAL AND REPORTS

kompos Anda.

**Apa saja yang tidak boleh digunakan untuk membuat pupuk kompos?** Secara umum, hanya bahan tanaman yang dapat dikomposkan. Daging, tulang, dan susu dapat menampung bakteri berbahaya dan tidak boleh ditambahkan ke tumpukan kompos.

**Berapa lama waktu yang dibutuhkan kubis untuk menjadi kompos?** Pengomposan secara alami memerlukan waktu yang relatif lama yaitu sekitar 2-3 bulan bahkan 6-12 bulan . Pengomposan dapat berlangsung lebih cepat dengan cara fermentasi menggunakan bantuan mikroorganisme (Subandriyo, 2012).

**Bagaimana cara membuat kompos dari kubis?** Mempersiapkan Limbah Kubis untuk Pengomposan Mulailah dengan memotong atau menyuwir daun, batang, dan akar kubis menjadi potongan-potongan kecil . Hal ini meningkatkan luas permukaan bahan, memungkinkan mikroorganisme menguraikannya lebih cepat.

**Bisakah daun pohon kubis dibuat kompos?** Daun pohon kubis, meskipun keras dan lambat terurai, namun dapat menjadi mulsa yang sangat efektif. Meletakkan daun di sekitar tanaman membantu mempertahankan kelembapan, menekan gulma, dan menambah bahan organik ke tanah seiring waktu. Bahan-bahan tersebut juga dapat ditambahkan ke tumpukan kompos dimana bahan-bahan tersebut akan terurai seiring berjalannya waktu .

**Is University of St Andrews a good school?** University of St Andrews is ranked #394 in Best Global Universities. Schools are ranked according to their performance across a set of widely accepted indicators of excellence.

**Who went to the University of St Andrews?** Notable alumni include Prince William, Duke of Cambridge; Catherine, Duchess of Cambridge; Alex Salmond, former First Minister of Scotland; and, Benjamin Franklin received an Honorary Degree from St Andrews in 1759.

## **Sonny Boy: A Haunting Tale from the Pages of Annejet van der Zijl**

### **Who is Sonny Boy?**

Sonny Boy is the protagonist of the acclaimed novel by Dutch author Annejet van der Zijl. The story revolves around a young Creole musician in Suriname during World War II, whose life takes a tragic turn.

## What is the Significance of the Novel?

"Sonny Boy" is a powerful and moving exploration of identity, race, and the horrors of war. It sheds light on a forgotten chapter in history, showcasing the impact of Suriname's colonial past and the complexities of its multi-ethnic society.

## How Does Sonny Boy Reflect the Social and Cultural Context of Suriname?

The novel portrays the tensions between different ethnic groups in Suriname, particularly the Creole and Javanese communities. It highlights the racial prejudices and inequalities that permeated society at the time. Sonny Boy's own struggle to find his place in a segregated world mirrors the experiences of many Surinamese people.

## What are the Themes Explored in the Book?

"Sonny Boy" explores themes such as loss, grief, betrayal, and the fragility of human life. It delves into the impact of war on individuals, families, and communities. The novel also examines the search for identity and belonging in a society grappling with its own identity crisis.

## What Impact Has the Novel Had?

"Sonny Boy" has received international acclaim for its moving storytelling and historical significance. It has been translated into multiple languages and has been adapted into a stage play and a film. The novel has sparked conversations about racism, colonialism, and the importance of reconciliation in Suriname and beyond.
