Shl Logical Reasoning Test: Answers

Paragraph 1:

The Shl logical reasoning test is a commonly used assessment tool designed to measure an individual's ability to identify patterns, draw conclusions, and solve problems. It presents a series of questions, typically in the form of statements or arguments, and requires candidates to determine the correct answer or identify the flaw in the argument.

Paragraph 2:

One type of question on the Shl logical reasoning test is the "Anshunore" question. Anshunore questions present a series of statements followed by a conclusion. Candidates must determine if the conclusion logically follows from the given statements.

Paragraph 3:

Example Anshunore Question:

Statements:

1. All cats are mammals.
2. All mammals have fur.
3. Whiskers are a characteristic of cats.

Conclusion: All cats have whiskers.

Answer: True. The conclusion logically follows from the given statements because if all cats are mammals and all mammals have fur, and whiskers are a characteristic of cats, then it is reasonable to conclude that all cats have whiskers.

Paragraph 4:

Another type of Anshunore question is the "Negated Conclusion" question. These questions present a series of statements followed by a conclusion that is the negation (opposite) of the conclusion that logically follows from the statements. Candidates must identify the flaw in the reasoning.

Paragraph 5:

Example Negated Conclusion Question:

Statements:

1. All dogs are canines.
2. All canines have sharp teeth.
3. Fluffy is a dog.

Conclusion: Fluffy does not have sharp teeth.

Answer: False. The conclusion does not logically follow from the given statements because if Fluffy is a dog and all dogs are canines, and all canines have sharp teeth, then it is logical to conclude that Fluffy has sharp teeth. The negated conclusion is therefore incorrect.
