**Can a locksmith make a key from a lock code?** Cutting the Key by Code - Some popular lock manufacturers will stamp key codes onto the key and on the lock. They can also often be found inside the lock's user manual. This will allow the locksmith to use the unique code to match the new key to the old lock.

**Can a locksmith open a jammed lock?** Trying to force open a jammed lock without the necessary expertise can result in irreparable damage and even pose a security threat to your business. Locksmiths possess specialist skills and tools that enable them to handle such situations effectively.

**How do you get a key made for a lock without another key to model it from?** All that's needed is an experienced locksmith who can take an accurate impression and cut you a new key from scratch. Furthermore, the "key impressing" works on almost any type of lock, even those without codes or other identifying information.

**Can I rekey a lock without the original key?** Without the matching key, the only way to rekey the lock will be to pick it open, and although it's usually not a problem for a skilled locksmith, it will often incur additional charges which can make it more expensive than replacing the lock altogether.

**What locks can locksmiths not open?**

**How to unlock a jammed lock?** Use a soft brush to remove any dirt or debris from your lock, then spray it with some graphite-based lubricant (particularly effective in reducing friction) or a lock-specific cleaner. Insert the key in the hole and turn it a few times to work the lubricant through the lock and hopefully release the jam.

**What is the best way to unstick a lock?** Use a can of compressed air or a small brush to clean the keyhole thoroughly. Lubricate the lock: Sticky locks are often due to a lack of lubrication. Apply a graphite-based or silicone-based lubricant specifically designed for locks. Avoid using oil-based lubricants as they can attract more dust and grime.

**Can a locksmith make a key with only the lock?** A locksmith is also able in some circumstances to take an impression of the lock. Unlike cracking the lock's code, this does not require the lock to be dismantled. A lock impression allows a locksmith to make a key without decoding the lock. For a qualified locksmith this can be an efficient way to create a new key.

**Is it possible to make a key without the original?** The short answer is, a duplicate key can be created from scratch even without the original key. Locksmiths use code cutters to detect the depth of grooves in a lock's key code. They use this information to make the right key.

**Can a locksmith get a broken key out of a lock?** For situations where the broken key fragment is lodged deeper and cannot be pulled out easily with tools like needle-nose pliers or magnets, professional locksmiths use tools known as key extractors. A key extractor tool is designed to remove offending, stuck fragments inside the lock.

**Can a locksmith cut a security key?** Only the locksmith that installs the security key system will be able to cut you more keys, unless the security key system is a MUL-T-Lock system. With Mul-T-Lock keys you are given a card that you can take to

any authorised dealer to have more keys duplicated.
