**Is it spaceflight or space flight?** Spaceflight (or space flight) is an application of astronautics to fly objects, usually spacecraft, into or through outer space, either with or without humans on board.

**Why is space flight important?** By venturing into space, scientists can utilize a multitude of instruments – such as probes, satellites, and state-of-the-art telescopes. They can gather data about celestial bodies and investigate the universe in its natural state.

**What are the stages of space flight?** Interplanetary mission operations may be considered in four phases: the Launch Phase, the Cruise Phase, the Encounter Phase, and, depending on the state of spacecraft health and mission funding, the Extended Operations Phase.
