But some models can handle much more weight. Keep in mind that the capacity depends on the specific vehicle and the nature of the lift.

**What is crane load capacity?** The lift capacity measurement of a crane tells us how much load a crane can lift naturally, including the dimension of the load, lift height, and lift angle. The average crane can lift between 10,000 and 60,000 pounds.

**How far can a 50 ton crane reach?** Produced by Terex, the American HC 50 is a hydraulic crawler crane that's nimble, yet, very capable of performing tough tasks. It has a 50 ton (45.4 t) max lift capacity, 160 ft. (48.8m) max lift crane boom length, and a 130+40 ft. (39.6+12.2 m) max lift crane boom & Jib length.

**How long is a 50t crane?**

**How do attitude and motivation help in learning a second language?** Motivation and attitude provide primary impetus to initiate learning language 2 (hereafter L2) and later the driving force to sustain the long and often tedious learning process. Lack of attention to these factors can lead to inefficiencies in learning L2.

**What did Gardner and Lambert (1972) say about motivation?** Gardner and Lambert (1972) claimed that those who were integratively motivated would be more successful in L2 learning than those who were instrumentally motivated.

**Who has provided the theory of attitude and motivation for language learning?**

Gardner, R.C. (1985). Social psychology and language learning: The role of attitudes and motivation.

**Why is motivation important in learning a second language?** Motivation is one of the important aspects of second language acquisition. Motivation is a kind of desire for learning. It is very difficult to teach a second language in a learning environment if the learner does not have a desire to learn a language.

**Why is attitude important in language learning?** There is always a sense of success while learning as a result of having a positive attitude towards languages. By having a positive attitude people tend to think more creatively and have a wish to learn. Having a positive perspective will lead to more successful learning.

**What is Gardner's motivation theory?** Gardner believes that motivation. consists of three components: the strength of motivation, the desire to learn languages, and the. attitude towards the act of learning languages [11]. This reveals a certain relationship between. learning motivation and learning attitude.

**What types of motivation was suggested by Gardner and Lambert?** Gardner and Lambert's (1972) theory of motivation focused on two important motivational constructs; integrative and instrumental motivation. The purpose of the study was to discover the relationship between these two motivational constructs and second language learning success.

**What are the two types of language learning motivation?** (1) Integrative & instrumental motivation According to Gardner and Lambert (1972), there are two types of motivation: integrative and instrumental. The integrative motivation means learning the language with the intention of participating in the culture of its people.

**What is the role of attitude in SLA?** Attitude plays a crucial role in second language acquisition. Learners' attitude towards reading in English affects their reading success, with factors such as previous reading experience and motivation needing attention .

**What is the attitude motivation theory?** According to the theory of reasoned action, if people evaluate the suggested behavior as positive (attitude), and if they

think their significant others want them to perform the behavior (subjective norm), this results in a higher intention (motivation) and they are more likely to do so.

**What is the relationship between attitude and motivation?** Attitude, which is closely related to motivation, refers to a pattern of beliefs developed over time in a given socio-cultural context. These beliefs play a critical role in the learning process.
