Wireless Communications Networks: Common Questions and Answers

1. What is a cellular network architecture and how does it operate? A cellular network consists of small geographical areas called cells, each covered by a base station. Mobile devices connect to the nearest base station, which then relays data to and from the core network. Cellular networks use multiple frequencies to accommodate the increasing demand for data and improve coverage.

2. Explain the differences between circuit-switched and packet-switched networks. Circuit-switched networks establish a dedicated channel between two devices, which is held open for the duration of the call or data transfer. Packet-switched networks break down data into packets and send them independently, using shared channels and re-assembling the packets at the destination.

3. Describe the evolution of wireless communications generations (1G, 2G, 3G, 4G, 5G). Each generation of wireless technology has brought improvements in data rates, bandwidth, and efficiency. 1G enabled basic voice calls, while 2G introduced digital data services. 3G provided high-speed data, and 4G significantly increased bandwidth and speeds. 5G is the latest generation, offering ultra-high speeds, low latency, and support for emerging technologies like the Internet of Things.

4. Discuss the key security challenges in wireless communications. Wireless networks are vulnerable to various security threats, including eavesdropping, jamming, denial of service, and unauthorized access. Encryption, authentication, and authorization protocols are implemented to address these challenges and ensure

data privacy and integrity.

5. What are some emerging trends in wireless communications technology?

Emerging trends include the adoption of millimeter-wave technology, which enables ultra-high speeds but has limited range; the deployment of Wi-Fi 6 and 6E for faster and more efficient indoor and outdoor wireless connectivity; and the development of low-power wide-area networks (LPWANs) for low-power IoT applications.
