## [Download Complete File](#)

**Why is impromptu speaking so valuable?** You can build your reputation and impress leaders in your organization when you learn to speak effectively under pressure. Impromptu speaking skills can also help you deliver an elevator pitch , conduct a successful question-and-answer session, or make important connections at a networking event.

**What is the disadvantage of impromptu speaking?** The disadvantage is that the speaker is given little or no time to contemplate the central theme of his or her message. As a result, the message may be disorganized and difficult for listeners to follow. Here is a step-by-step guide that may be useful if you are called upon to give an impromptu speech in public.

**What is the strength of impromptu speech?** Strengths of Impromptu Delivery Content and delivery are spontaneous, which can make the speech more engaging (if a speaker's anxiety is under control). It enhances public speaking skills because speakers have to “think on their feet.”

## **Software by Numbers: Low-Risk, High-Return Development**

**Q: What is software by numbers?**

A: Software by numbers is a development approach that uses data analytics to optimize software development processes. It quantifies the risk and potential return of each feature, allowing teams to prioritize their efforts and maximize value.

**Q: What are the benefits of using software by numbers?**

A: Software by numbers reduces risk by identifying potential issues early on. It also improves efficiency by prioritizing features based on their potential value and aligning

development efforts with business goals. Furthermore, it enables data-driven decision-making and promotes transparency within development teams.

**Q: How does software by numbers work?**

A: Software by numbers involves collecting data on various development aspects, such as feature complexity, team skillset, and market demand. This data is then analyzed using statistical models to estimate the risk and potential return of each feature. The results are presented in a numerical format, providing a concrete basis for decision-making.

**Q: Is software by numbers suitable for all software projects?**

A: Software by numbers is particularly beneficial for projects with strict timelines and limited resources. It helps teams focus on the most important features and allocate their resources more effectively. However, it may not be suitable for every project, especially those involving significant innovation or highly unpredictable outcomes.

**Q: What are the key success factors for using software by numbers?**

A: Successful implementation of software by numbers requires:

- **Data collection:** Gathering accurate and comprehensive data is crucial for reliable analysis.
- **Model selection:** Choosing the appropriate statistical models to estimate risk and return.
- **Team collaboration:** Encouraging open discussion and consensus-building based on data analysis.
- **Continuous improvement:** Regularly reviewing and refining the development process based on data and feedback.

By embracing software by numbers, development teams can enhance their decision-making, reduce risk, and drive higher returns on their software development investments.
