Clothing that matches one or more of these functions can be considered functional.

What kind of fabric is performance fabric? While some fabrics may overlap multiple categories, such as treated acrylic/polyester or treated olefin/polyester blends, the vast majority of performance fabrics fall firmly into 3 groups —acrylic fabrics, olefin fabrics, and treated fabrics.

What are the 3 main types of fabric? The three main types of fabric are natural fibers (such as cotton, wool, and silk), synthetic fibers (like polyester, nylon, and acrylic), and blended fibers, which combine both natural and synthetic materials.

What are the functional properties of fabrics? For instance, fabric strength may be quantified as tensile, tearing, or bursting strength or any combination of these properties; wear-life and durability as performance criteria may be measured in terms of abrasion- and pill-resistance: comfort may be expressed in terms of thermal-insulative properties, air- ...
