Trigonometric Graphs: Past Paper Questions and Answers

Trigonometric graphs are a fundamental aspect of mathematics, used extensively in various scientific and engineering applications. Past paper questions provide invaluable practice and insight into the concepts and techniques related to these graphs. Here are some common questions that appear in past papers, along with their answers:

Question 1: Sketch the graph of $y = \sin(x)$ for $0 \leq x \leq 2\pi$.

Answer: The graph of $y = \sin(x)$ is a continuous wave that oscillates between -1 and 1. It starts at $(0, 0)$, rises to $(\pi/2, 1)$, falls to $(\pi, 0)$, rises again to $(3\pi/2, 1)$, and finally falls to $(2\pi, 0)$.

Question 2: Find the amplitude and period of the graph $y = 2\cos(3x + \pi)$.

Answer: Amplitude: The amplitude of a cosine graph is the distance between the maximum and minimum values. In this case, the maximum value is 2 and the minimum value is -2, so the amplitude is 2. Period: The period of a cosine graph is the distance from one peak to the next. In this case, the period is $2\pi/3$.

Question 3: Sketch the graph of $y = -\tan(x) + 1$.

Answer: The graph of $y = -\tan(x) + 1$ is a series of vertical asymptotes at $x = \pi/2 + \pi n$ (where n is an integer), with the graph approaching infinity on either side of these asymptotes. The graph shifted up by 1 unit compared to the standard tangent graph.

Question 4: Find the range of the graph $y = \sin(x) + \cos(x)$.

Answer: To find the range, we first find the maximum and minimum values of the constituent sine and cosine functions, which are -1 and 1, respectively. The sum of these values gives the maximum range of the combined function, which is 2.

However, since the sine and cosine functions can cancel each other out in some regions, the actual range is narrower than this.

Question 5: Sketch the graph of $y = 2\sec(\pi x - \pi/2)$.

Answer: The graph of $y = 2\sec(\pi x - \pi/2)$ is a series of vertical asymptotes at $x = (2n + 1)/2$ (where n is an integer), with the graph approaching infinity on either side of these asymptotes. The graph shifted to the right by $\pi/2$ units compared to the standard secant graph and stretched vertically by a factor of 2.
